## Typographic Conventions

**name**; *f*name; *g*name; *m*name; *s*name; *v*\*name\*; *c*name  
 ▷ Symbol defined in Common Lisp; esp. function, generic function, macro, special operator, variable, constant.

*them*            ▷ Placeholder for actual code.

**me**             ▷ Literal text.

[*foo**bar*]       ▷ Either one *foo* or nothing; defaults to **bar**.

*foo*\*; {*foo*}\*    ▷ Zero or more *foos*.

*foo*<sup>+</sup>; {*foo*}<sup>+</sup>   ▷ One or more *foos*.

*foos*            ▷ English plural denotes a list argument.

{*foo*|*bar*|*baz*};  $\begin{cases} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{cases}$     ▷ Either *foo*, or *bar*, or *baz*.

$\begin{cases} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{cases}$     ▷ Anything from none to each of *foo*, *bar*, and *baz*.

$\widehat{\textit{foo}}$             ▷ Argument *foo* is not evaluated.

$\widetilde{\textit{bar}}$             ▷ Argument *bar* is possibly modified.

*foo*<sup>P<sub>k</sub></sup>            ▷ *foo*\* is evaluated as in **sprogn**; see page 20.

$\underline{\textit{foo}}_2$ ;  $\underline{\textit{bar}}_2$ ;  $\underline{\textit{baz}}_n$     ▷ Primary, secondary, and *n*th return value.

T; NIL            ▷ **t**, or truth in general; and **nil** or **()**.

# 1 Numbers

## 1.1 Predicates

$(f = number^+)$   
 $(f \neq number^+)$   
▷ T if all *numbers*, or none, respectively, are equal in value.

$(f > number^+)$   
 $(f \geq number^+)$   
 $(f < number^+)$   
 $(f \leq number^+)$

▷ Return T if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(f \text{ minusp } a)$   
 $(f \text{ zerop } a)$   
 $(f \text{ plusp } a)$   
▷ T if  $a < 0$ ,  $a = 0$ , or  $a > 0$ , respectively.

$(f \text{ evenp } int)$   
 $(f \text{ oddp } int)$   
▷ T if *int* is even or odd, respectively.

$(f \text{ numberp } foo)$   
 $(f \text{ realp } foo)$   
 $(f \text{ rationalp } foo)$   
 $(f \text{ floatp } foo)$   
 $(f \text{ integerp } foo)$   
 $(f \text{ complexp } foo)$   
 $(f \text{ random-state-p } foo)$   
▷ T if *foo* is of indicated type.

## 1.2 Numeric Functions

$(f + a_{\square}^*)$   
 $(f * a_{\square}^*)$   
▷ Return  $\sum a$  or  $\prod a$ , respectively.

$(f - a b^*)$   
 $(f / a b^*)$   
▷ Return  $a - \sum b$  or  $a / \prod b$ , respectively. Without any *bs*, return  $-a$  or  $1/a$ , respectively.

$(f 1+ a)$   
 $(f 1- a)$   
▷ Return  $a + 1$  or  $a - 1$ , respectively.

$(\left\{ \begin{matrix} m \text{ incf} \\ m \text{ decf} \end{matrix} \right\} place [delta_{\square}])$   
▷ Increment or decrement the value of *place* by *delta*. Return new value.

$(f \text{ exp } p)$   
 $(f \text{ expt } b p)$   
▷ Return  $e^p$  or  $b^p$ , respectively.

$(f \text{ log } a [b_{\square}])$   
▷ Return  $\log_b a$  or, without *b*,  $\ln a$ .

$(f \text{ sqrt } n)$   
 $(f \text{ isqrt } n)$   
▷  $\sqrt{n}$  in complex numbers/natural numbers.

$(f \text{ lcm } integer^*_{\square})$   
 $(f \text{ gcd } integer^*_{\square})$   
▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

**cpi** ▷ long-float approximation of  $\pi$ , Ludolph's number.

$(f \text{ sin } a)$   
 $(f \text{ cos } a)$   
 $(f \text{ tan } a)$   
▷  $\sin a$ ,  $\cos a$ , or  $\tan a$ , respectively. (*a* in radians.)

$(f \text{ asin } a)$   
 $(f \text{ acos } a)$   
▷  $\arcsin a$  or  $\arccos a$ , respectively, in radians.

$(f \text{ atan } a [b_{\square}])$   
▷  $\arctan \frac{a}{b}$  in radians.

$(f \text{ sinh } a)$   
 $(f \text{ cosh } a)$   
 $(f \text{ tanh } a)$   
▷  $\sinh a$ ,  $\cosh a$ , or  $\tanh a$ , respectively.

(*f*asinh *a*)  
 (*f*acosh *a*) ▷ asinh *a*, acosh *a*, or atanh *a*, respectively.  
 (*f*atanh *a*)

(*f*cis *a*) ▷ Return  $e^{i a} = \cos a + i \sin a$ .

(*f*conjugate *a*) ▷ Return complex conjugate of *a*.

(*f*max *num*<sup>+</sup>)  
 (*f*min *num*<sup>+</sup>) ▷ Greatest or least, respectively, of *nums*.

( $\left. \begin{array}{l} \{f\text{round} | f\text{round}\} \\ \{f\text{floor} | f\text{ffloor}\} \\ \{f\text{ceiling} | f\text{ceiling}\} \\ \{f\text{truncate} | f\text{truncate}\} \end{array} \right\} n [d_{\square}])$ )  
 ▷ Return as **integer** or **float**, respectively,  $n/d$  rounded, or rounded towards  $-\infty$ ,  $+\infty$ , or 0, respectively; and remainder.

( $\left. \begin{array}{l} \{f\text{mod}\} \\ \{f\text{rem}\} \end{array} \right\} n d$ )  
 ▷ Same as *f*floor or *f*truncate, respectively, but return remainder only.

(*f*random *limit*  $\widehat{\text{state}}_{\text{random-state}}$ )  
 ▷ Return non-negative random number less than *limit*, and of the same type.

(*f*make-random-state [*state* | NIL | T] |  $\widehat{\text{state}}$ )  
 ▷ Copy of **random-state** object *state* or of the current random state; or a randomly initialized fresh random state.

\*random-state\* ▷ Current random state.

(*f*float-sign *num-a* [*num-b* |  $\square$ ]) ▷ *num-b* with *num-a*'s sign.

(*f*signum *n*)  
 ▷ Number of magnitude 1 representing sign or phase of *n*.

(*f*numerator *rational*)  
 (*f*denominator *rational*)  
 ▷ Numerator or denominator, respectively, of *rational*'s canonical form.

(*f*realpart *number*)  
 (*f*imagpart *number*)  
 ▷ Real part or imaginary part, respectively, of *number*.

(*f*complex *real* [*imag* |  $\square$ ]) ▷ Make a complex number.

(*f*phase *num*) ▷ Angle of *num*'s polar representation.

(*f*abs *n*) ▷ Return  $|n|$ .

(*f*rational *real*)  
 (*f*rationalize *real*)  
 ▷ Convert *real* to rational. Assume complete/limited accuracy for *real*.

(*f*float *real* [*prototype* |  $\square$ . $\square$ ])  
 ▷ Convert *real* into float with type of *prototype*.

 (flognot integer)  $\triangleright$   $\neg \text{integer}$ .  
 (flogeqv integer\*)  
 (flogand integer\*)  
 $\triangleright$  Return value of exclusive-nored or anded integers, respectively. Without any integer, return  $\underline{-1}$ .  
 (flogandc1 int-a int-b)  $\triangleright$   $\neg \text{int-a} \wedge \text{int-b}$ .  
 (flogandc2 int-a int-b)  $\triangleright$   $\text{int-a} \wedge \neg \text{int-b}$ .  
 (flognand int-a int-b)  $\triangleright$   $\neg(\text{int-a} \wedge \text{int-b})$ .  
 (flogxor integer\*)  
 (flogior integer\*)  
 $\triangleright$  Return value of exclusive-ored or ored integers, respectively. Without any integer, return  $\underline{0}$ .  
 (flogorc1 int-a int-b)  $\triangleright$   $\neg \text{int-a} \vee \text{int-b}$ .  
 (flogorc2 int-a int-b)  $\triangleright$   $\text{int-a} \vee \neg \text{int-b}$ .  
 (flognor int-a int-b)  $\triangleright$   $\neg(\text{int-a} \vee \text{int-b})$ .  
 (flogbitp i int)  $\triangleright$   $\underline{T}$  if zero-indexed *i*th bit of *int* is set.  
 (flogtest int-a int-b)  
 $\triangleright$  Return  $\underline{T}$  if there is any bit set in *int-a* which is set in *int-b* as well.  
 (flogcount int)  
 $\triangleright$  Number of 1 bits in *int*  $\geq 0$ , number of 0 bits in *int*  $< 0$ .
- ## 1.4 Integer Functions
- (finteger-length integer)  
 $\triangleright$  Number of bits necessary to represent integer.  
 (fldb-test byte-spec integer)  
 $\triangleright$  Return  $\underline{T}$  if any bit specified by *byte-spec* in *integer* is set.  
 (fash integer count)  
 $\triangleright$  Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count*  $< 0$ , shifted right discarding bits.  
 (fldb byte-spec integer)  
 $\triangleright$  Extract *byte* denoted by *byte-spec* from *integer*. **setfable**.  
 {fdeposit-field}  
 {fdbp} *int-a byte-spec int-b*  
 $\triangleright$  Return *int-b* with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (fbyte-size *byte-spec*) bits of *int-a*, respectively.  
 (fmask-field byte-spec integer)  
 $\triangleright$  Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.  
 (fbyte size position)  
 $\triangleright$  **Byte specifier** for a byte of *size* bits starting at a weight of *position*.  
 (fbyte-size byte-spec)  
 (fbyte-position byte-spec)  
 $\triangleright$  **Size** or **position**, respectively, of *byte-spec*.

## 1.5 Implementation-Dependent

$\left. \begin{array}{l} \text{cshort-float} \\ \text{csingle-float} \\ \text{cdouble-float} \\ \text{clong-float} \end{array} \right\} \begin{array}{l} \text{epsilon} \\ \text{negative-epsilon} \end{array}$   
 ▷ Smallest possible number making a difference when added or subtracted, respectively.

$\left. \begin{array}{l} \text{cleast-negative} \\ \text{cleast-negative-normalized} \\ \text{cleast-positive} \\ \text{cleast-positive-normalized} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \end{array}$   
 ▷ Available numbers closest to  $-0$  or  $+0$ , respectively.

$\left. \begin{array}{l} \text{cmost-negative} \\ \text{cmost-positive} \end{array} \right\} \begin{array}{l} \text{short-float} \\ \text{single-float} \\ \text{double-float} \\ \text{long-float} \\ \text{fixnum} \end{array}$   
 ▷ Available numbers closest to  $-\infty$  or  $+\infty$ , respectively.

$(f\text{decode-float } n)$   
 $(f\text{integer-decode-float } n)$   
 ▷ Return significant, exponent, and sign of float  $n$ .

$(f\text{scale-float } n \ i)$  ▷ With  $n$ 's radix  $b$ , return  $nb^i$ .

$(f\text{float-radix } n)$   
 $(f\text{float-digits } n)$   
 $(f\text{float-precision } n)$   
 ▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float  $n$ .

$(f\text{upgraded-complex-part-type } foo \ [environment\ \underline{\text{env}}])$   
 ▷ Type of most specialized **complex** number able to hold parts of type  $foo$ .

## 2 Characters

The **standard-char** type comprises a-z, A-Z, 0-9, Newline, Space, and `!?"' ". . . ; * + - / \ | ~ _ ^ < > = # % & ( ) [ ] { }`.

$(f\text{characterp } foo)$   
 $(f\text{standard-char-p } char)$  ▷ T if argument is of indicated type.

$(f\text{graphic-char-p } character)$   
 $(f\text{alpha-char-p } character)$   
 $(f\text{alphanumericp } character)$   
 ▷ T if  $character$  is visible, alphabetic, or alphanumeric, respectively.

$(f\text{upper-case-p } character)$   
 $(f\text{lower-case-p } character)$   
 $(f\text{both-case-p } character)$   
 ▷ Return T if  $character$  is uppercase, lowercase, or able to be in another case, respectively.

$(f\text{digit-char-p } character \ [radix\ \underline{10}])$   
 ▷ Return its weight if  $character$  is a digit, or NIL otherwise.

$(f\text{char=} \ character^+)$   
 $(f\text{char/=} \ character^+)$   
 ▷ Return T if all  $characters$ , or none, respectively, are equal.

$(f\text{char-equal } \ character^+)$   
 $(f\text{char-not-equal } \ character^+)$   
 ▷ Return T if all  $characters$ , or none, respectively, are equal ignoring case.

$(f\text{char} > \ character^+)$   
 $(f\text{char} >= \ character^+)$   
 $(f\text{char} < \ character^+)$   
 $(f\text{char} <= \ character^+)$   
 ▷ Return T if  $characters$  are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

## 16 External Environment

$(f\text{get-internal-real-time})$   
 $(f\text{get-internal-run-time})$   
 ▷ Current time, or computing time, respectively, in clock ticks.

$\text{cinternal-time-units-per-second}$   
 ▷ Number of clock ticks per second.

$(f\text{encode-universal-time } sec \ min \ hour \ date \ month \ year \ [zone\ \underline{\text{curren}}])$   
 $(f\text{get-universal-time})$   
 ▷ Seconds from 1900-01-01, 00:00, ignoring leap seconds.

$(f\text{decode-universal-time } universal-time \ [time-zone\ \underline{\text{curren}}])$   
 $(f\text{get-decoded-time})$   
 ▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

$(f\text{short-site-name})$   
 $(f\text{long-site-name})$   
 ▷ String representing physical location of computer.

$\left. \begin{array}{l} (f\text{lisp-implementation}) \\ (f\text{software}) \\ (f\text{machine}) \end{array} \right\} \begin{array}{l} \text{type} \\ \text{version} \end{array}$   
 ▷ Name or version of implementation, operating system, or hardware, respectively.

$(f\text{machine-instance})$  ▷ Computer name.

- (*m*trace  $\left\{ \begin{array}{l} \text{function} \\ \text{(setf function)} \end{array} \right\}^*$ )  
 ▷ Cause *functions* to be traced. With no arguments, return list of traced functions.
- (*m*untrace  $\left\{ \begin{array}{l} \text{function} \\ \text{(setf function)} \end{array} \right\}^*$ )  
 ▷ Stop *functions*, or each currently traced function, from being traced.
- v*\*trace-output\*  
 ▷ Output stream *m*trace and *m*time send their output to.
- (*m*step *form*)  
 ▷ Step through evaluation of *form*. Return values of form.
- (*f*break [*control arg*\*])  
 ▷ Jump directly into debugger; return NIL. See page 36, *f*format, for *control* and *args*.
- (*m*time *form*)  
 ▷ Evaluate *forms* and print timing information to *v*\*trace-output\*. Return values of form.
- (*f*inspect *foo*)   ▷ Interactively give information about *foo*.
- (*f*describe *foo* [*stream* \*standard-output\*])  
 ▷ Send information about *foo* to *stream*.
- (*g*describe-object *foo* [*stream*])  
 ▷ Send information about *foo* to *stream*. Called by *f*describe.
- (*f*disassemble *function*)  
 ▷ Send disassembled representation of *function* to \*standard-output\*. Return NIL.
- (*f*room [{NIL|default|T|default])  
 ▷ Print information about internal storage management to \*standard-output\*.

## 15.4 Declarations

- (*f*proclaim *decl*)  
 (*m*declaim *decl*\*)  
 ▷ Globally make declaration(s) *decl*. *decl* can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.
- (declare *decl*\*)  
 ▷ Inside certain forms, locally make declarations *decl*\*. *decl* can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.
- (**declaration** *foo*\*)  
 ▷ Make *foos* names of declarations.
- (**dynamic-extent** *variable*\* (**function** *function*\*)\*)  
 ▷ Declare lifetime of *variables* and/or *functions* to end when control leaves enclosing block.
- (**[type]** *type variable*\*)  
 (**ftype** *type function*\*)  
 ▷ Declare *variables* or *functions* to be of *type*.
- (**{ignorable}**  $\left\{ \begin{array}{l} \text{var} \\ \text{(function function)} \end{array} \right\}^*$ )  
 ▷ Suppress warnings about used/unused bindings.
- (**inline** *function*\*)  
 (**notinline** *function*\*)  
 ▷ Tell compiler to integrate/not to integrate, respectively, called *functions* into the calling routine.
- (**optimize**  $\left\{ \begin{array}{l} \text{compilation-speed} \left( \begin{array}{l} \text{compilation-speed } n_{\square} \\ \text{debug} \left( \begin{array}{l} \text{debug } n_{\square} \\ \text{safety} \left( \begin{array}{l} \text{safety } n_{\square} \\ \text{space} \left( \begin{array}{l} \text{space } n_{\square} \\ \text{speed} \left( \text{speed } n_{\square} \end{array} \right) \end{array} \right) \end{array} \right) \end{array} \right) \end{array} \right\}^*$ )  
 ▷ Tell compiler how to optimize. *n* = 0 means unimportant, *n* = 1 is neutral, *n* = 3 means important.
- (**special** *var*\*)   ▷ Declare *vars* to be dynamic.

- (*f*char-greaterp *character*+)  
 (*f*char-not-lessp *character*+)  
 (*f*char-lessp *character*+)  
 (*f*char-not-greaterp *character*+)  
 ▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.
- (*f*char-upcase *character*)  
 (*f*char-downcase *character*)  
 ▷ Return corresponding uppercase/lowercase character, respectively.
- (*f*digit-char *i* [*radius* 0])   ▷ Character representing digit *i*.
- (*f*char-name *char*)   ▷ *char*'s name if any, or NIL.
- (*f*name-char *foo*)   ▷ Character named *foo* if any, or NIL.
- (*f*char-int *character*)  
 (*f*char-code *character*)   ▷ Code of *character*.
- (*f*code-char *code*)   ▷ Character with *code*.
- c*char-code-limit   ▷ Upper bound of (*f*char-code *char*); ≥ 96.
- (*f*character *c*)   ▷ Return #\c.

## 3 Strings

Strings can as well be manipulated by array and sequence functions; see pages 10 and 12.

- (*f*stringp *foo*)  
 (*f*simple-string-p *foo*)   ▷ T if *foo* is of indicated type.
- ( $\left\{ \begin{array}{l} \text{fstring=} \\ \text{fstring-equal} \end{array} \right\} \text{foo bar} \left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\square} \\ \text{:start2 } \text{start-bar}_{\square} \\ \text{:end1 } \text{end-foo}_{\square} \\ \text{:end2 } \text{end-bar}_{\square} \end{array} \right\}$ )  
 ▷ Return T if subsequences of *foo* and *bar* are equal. Obey/ignore, respectively, case.
- ( $\left\{ \begin{array}{l} \text{fstring}\{/= \text{|-not-equal}\} \\ \text{fstring}\{> \text{|-greaterp}\} \\ \text{fstring}\{>= \text{|-not-lessp}\} \\ \text{fstring}\{< \text{|-lessp}\} \\ \text{fstring}\{<= \text{|-not-greaterp}\} \end{array} \right\} \text{foo bar} \left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\square} \\ \text{:start2 } \text{start-bar}_{\square} \\ \text{:end1 } \text{end-foo}_{\square} \\ \text{:end2 } \text{end-bar}_{\square} \end{array} \right\}$ )  
 ▷ If *foo* is lexicographically not equal, greater, not less, less, or not greater, respectively, then return position of first mismatching character in *foo*. Otherwise return NIL. Obey/ignore, respectively, case.
- (*f*make-string *size*  $\left\{ \begin{array}{l} \text{:initial-element } \text{char} \\ \text{:element-type } \text{type}_{\text{character}} \end{array} \right\}$ )  
 ▷ Return string of length *size*.
- (*f*string *x*)  
 ( $\left\{ \begin{array}{l} \text{fstring-capitalize} \\ \text{fstring-upcase} \\ \text{fstring-downcase} \end{array} \right\} x \left\{ \begin{array}{l} \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\square} \end{array} \right\}$ )  
 ▷ Convert *x* (**symbol**, **string**, or **character**) into a string, a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.
- ( $\left\{ \begin{array}{l} \text{fnstring-capitalize} \\ \text{fnstring-upcase} \\ \text{fnstring-downcase} \end{array} \right\} \widetilde{\text{string}} \left\{ \begin{array}{l} \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\square} \end{array} \right\}$ )  
 ▷ Convert *string* into a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.
- ( $\left\{ \begin{array}{l} \text{fstring-trim} \\ \text{fstring-left-trim} \\ \text{fstring-right-trim} \end{array} \right\} \text{char-bag string}$ )  
 ▷ Return string with all characters in sequence *char-bag* removed from both ends, from the beginning, or from the end, respectively.

(*f*char string *i*)  
 (*f*schar string *i*)  
 ▷ Return zero-indexed *i*th character of string ignoring/obeying, respectively, fill pointer. **setfable**.

(*f*parse-integer string  $\left\{ \begin{array}{l} \text{:start } start_{\text{NIL}} \\ \text{:end } end_{\text{NIL}} \\ \text{:radix } int_{\text{10}} \\ \text{:junk-allowed } bool_{\text{NIL}} \end{array} \right\}$ )  
 ▷ Return integer parsed from *string* and index of parse end.

## 4 Conses

### 4.1 Predicates

(*f*consp *foo*)  
 (*f*listp *foo*)  
 ▷ Return T if *foo* is of indicated type.

(*f*endp *list*)  
 (*f*null *foo*)  
 ▷ Return T if *list/foo* is NIL.

(*f*atom *foo*)  
 ▷ Return T if *foo* is not a **cons**.

(*f*tailp *foo list*)  
 ▷ Return T if *foo* is a tail of *list*.

(*f*member *foo list*  $\left\{ \begin{array}{l} \text{:test } function_{\text{#\#eql}} \\ \text{:test-not } function \\ \text{:key } function \end{array} \right\}$ )  
 ▷ Return tail of *list* starting with its first element matching *foo*. Return NIL if there is no such element.

$\left\{ \begin{array}{l} \text{:fmember-if} \\ \text{:fmember-if-not} \end{array} \right\}$  *test list* [:key function]  
 ▷ Return tail of *list* starting with its first element satisfying *test*. Return NIL if there is no such element.

(*f*subsetp *list-a list-b*  $\left\{ \begin{array}{l} \text{:test } function_{\text{#\#eql}} \\ \text{:test-not } function \\ \text{:key } function \end{array} \right\}$ )  
 ▷ Return T if *list-a* is a subset of *list-b*.

### 4.2 Lists

(*f*cons *foo bar*)  
 ▷ Return new cons (*foo . bar*).

(*f*list *foo\**)  
 ▷ Return list of *foos*.

(*f*list\* *foo+*)  
 ▷ Return list of *foos* with last *foo* becoming cdr of last cons. Return *foo* if only one *foo* given.

(*f*make-list *num* [:initial-element *foo*\_{\text{NIL}}])  
 ▷ New list with *num* elements set to *foo*.

(*f*list-length *list*)  
 ▷ Length of *list*; NIL for circular *list*.

(*f*car *list*)  
 ▷ Car of *list* or NIL if *list* is NIL. **setfable**.

(*f*cdr *list*)  
 (*f*rest *list*)  
 ▷ Cdr of *list* or NIL if *list* is NIL. **setfable**.

(*f*nthcdr *n list*)  
 ▷ Return tail of *list* after calling *f*cdr *n* times.

$\left\{ \begin{array}{l} \text{:ffirst} \\ \text{:fsecond} \\ \text{:fthird} \\ \text{:ffourth} \\ \text{:ffifth} \\ \text{:fsixth} \\ \dots \\ \text{:fninth} \\ \text{:ftenth} \end{array} \right\}$  *list*)  
 ▷ Return nth element of *list* if any, or NIL otherwise. **setfable**.

(*f*nth *n list*)  
 ▷ Zero-indexed nth element of *list*. **setfable**.

(*f*cXr *list*)  
 ▷ With *X* being one to four **as** and **ds** representing *f*cars and *f*cdrs, e.g. (*f*cadr *bar*) is equivalent to (*f*car (*f*cdr *bar*)). **setfable**.

(*f*last *list* [*num*\_{\text{NIL}}])  
 ▷ Return list of last num conses of *list*.

(*s*eval-when  $\left( \left\{ \begin{array}{l} \text{:compile-toplevel|compile} \\ \text{:load-toplevel|load} \\ \text{:execute|eval} \end{array} \right\} \right)$  *form*\_{\text{P}}^\*)  
 ▷ Return values of *forms* if *s*eval-when is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (**compile**, **load** and **eval** deprecated.)

(*s*locally (declare  $\widehat{decl}$ )\* *form*\_{\text{P}}^\*)  
 ▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of *forms*.

(*m*with-compilation-unit ([:override *bool*\_{\text{NIL}}]) *form*\_{\text{P}}^\*)  
 ▷ Return values of *forms*. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

(*s*load-time-value *form* [*read-only*\_{\text{NIL}}])  
 ▷ Evaluate *form* at compile time and treat its value as literal at run time.

(*s*quote  $\widehat{foo}$ )  
 ▷ Return unevaluated *foo*.

(*g*make-load-form *foo* [*environment*])  
 ▷ Its methods are to return a creation form which on evaluation at *f*load time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

(*f*make-load-form-saving-slots *foo*  $\left\{ \begin{array}{l} \text{:slot-names } slots_{\text{all local slots}} \\ \text{:environment } environment \end{array} \right\}$ )  
 ▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with slots initialized with the corresponding values from *foo*.

(*f*macro-function *symbol* [*environment*])

(*f*compiler-macro-function  $\left\{ \begin{array}{l} \text{:name} \\ \text{:setf } name \end{array} \right\}$  [*environment*])  
 ▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. **setfable**.

(*f*eval *arg*)  
 ▷ Return values of value of *arg* evaluated in global environment.

### 15.3 REPL and Debugging

v+|v++|v+++

v\*|v\*\*|v\*\*\*

v/|v//|v///

▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

v- ▷ Form currently being evaluated by the REPL.

(*f*apropos *string* [*package*\_{\text{NIL}}])  
 ▷ Print interned symbols containing *string*.

(*f*apropos-list *string* [*package*\_{\text{NIL}}])  
 ▷ List of interned symbols containing *string*.

(*f*dribble [*path*])  
 ▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

(*f*ed [*file-or-function*\_{\text{NIL}}])  
 ▷ Invoke editor if possible.

$\left\{ \begin{array}{l} \text{:fmacroexpand-1} \\ \text{:fmacroexpand} \end{array} \right\}$  *form* [*environment*\_{\text{NIL}}])  
 ▷ Return macro expansion, once or entirely, respectively, of *form* and T if *form* was a macro form. Return *form* and NIL otherwise.

v\*macroexpand-hook\*  
 ▷ Function of arguments expansion function, macro form, and environment called by *f*macroexpand-1 to generate macro expansions.

$\left\{ \left( \text{setf } \underline{g} \text{documentation} \right) \text{ new-doc} \right\} \text{foo} \left\{ \begin{array}{l} \text{'variable}' \text{'function}' \\ \text{'compiler-macro}' \\ \text{'method-combination}' \\ \text{'structure}' \text{'type}' \text{'setf}' \text{'T'} \end{array} \right\}$

▷ Get/set documentation string of *foo* of given type.

**ct**

▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; **v\*terminal-io\***.

**cnil|c()**

▷ Falsity; the empty list; the empty type, subtype of every type; **v\*standard-input\***; **v\*standard-output\***; the global environment.

## 14.4 Standard Packages

**common-lisp|cl**

▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

**common-lisp-user|cl-user**

▷ Current package after startup; uses package **common-lisp**.

**keyword**

▷ Contains symbols which are defined to be of type **keyword**.

## 15 Compiler

### 15.1 Predicates

$(\text{special-operator-p } \text{foo})$  ▷ **T** if *foo* is a special operator.

$(\text{compiled-function-p } \text{foo})$

▷ **T** if *foo* is of type **compiled-function**.

### 15.2 Compilation

$(\text{compile } \left\{ \begin{array}{l} \text{NIL definition} \\ \text{name} \\ \text{(setf name)} \end{array} \right\} [\text{definition}] \right)$

▷ Return compiled function or replace *name*'s function definition with the compiled function. Return **T** in case of **warnings** or **errors**, and **T** in case of **warnings** or **errors** excluding **style-warnings**.

$(\text{compile-file } \text{file} \left\{ \begin{array}{l} \text{:output-file } \text{out-path} \\ \text{:verbose } \text{bool}_{\text{v}*compile-verbose*}} \\ \text{:print } \text{bool}_{\text{v}*compile-print*}} \\ \text{:external-format } \text{file-format}_{\text{cdefault}} \end{array} \right\})$

▷ Write compiled contents of *file* to *out-path*. Return **true** output path or **NIL**, **T** in case of **warnings** or **errors**, **T** in case of **warnings** or **errors** excluding **style-warnings**.

$(\text{compile-file-pathname } \text{file} [\text{:output-file } \text{path}] [\text{other-keyargs}])$

▷ Pathname *fcompile-file* writes to if invoked with the same arguments.

$(\text{load } \text{path} \left\{ \begin{array}{l} \text{:verbose } \text{bool}_{\text{v}*load-verbose*}} \\ \text{:print } \text{bool}_{\text{v}*load-print*}} \\ \text{:if-does-not-exist } \text{bool}_{\text{T}} \\ \text{:external-format } \text{file-format}_{\text{cdefault}} \end{array} \right\})$

▷ Load source file or compiled file into Lisp environment. Return **T** if successful.

**v\*compile-file**  $\left\{ \begin{array}{l} \text{pathname}_{\text{NIL}} \\ \text{truname}_{\text{NIL}} \end{array} \right\}$

▷ Input file used by *fcompile-file*/by *fload*.

**v\*compile**  $\left\{ \begin{array}{l} \text{print*} \\ \text{verbose*} \end{array} \right\}$

▷ Defaults used by *fcompile-file*/by *fload*.

$\left( \left\{ \begin{array}{l} \text{butlast } \text{list} \\ \text{rbutlast } \text{list} \end{array} \right\} [\text{num}_{\text{T}}] \right)$  ▷ *list* excluding last *num* conses.

$\left( \left\{ \begin{array}{l} \text{rplaca} \\ \text{rplacd} \end{array} \right\} \widetilde{\text{cons object}} \right)$

▷ Replace *car*, or *cdr*, respectively, of *cons* with *object*.

$(\text{ldiff } \text{list } \text{foo})$

▷ If *foo* is a tail of *list*, return preceding part of list. Otherwise return *list*.

$(\text{fadjoin } \text{foo } \text{list} \left\{ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\} \right\})$

▷ Return *list* if *foo* is already member of *list*. If not, return (fcons foo list).

$(\text{mpop } \widetilde{\text{place}})$

▷ Set *place* to (fcdr place), return (fcar place).

$(\text{mpush } \text{foo } \widetilde{\text{place}})$  ▷ Set *place* to (fcons foo place).

$(\text{mpushnew } \text{foo } \widetilde{\text{place}} \left\{ \left\{ \begin{array}{l} \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:key } \text{function} \end{array} \right\} \right\})$

▷ Set *place* to (fadjoin foo place).

$(\text{fappend } [\text{proper-list}^* \text{foo}_{\text{NIL}}])$

$(\text{fnconc } [\text{non-circular-list}^* \text{foo}_{\text{NIL}}])$

▷ Return concatenated list or, with only one argument, *foo*. *foo* can be of any type.

$(\text{frevappend } \text{list } \text{foo})$

$(\text{fnreconc } \text{list } \text{foo})$

▷ Return concatenated list after reversing order in *list*.

$\left( \left\{ \begin{array}{l} \text{fmapcar} \\ \text{fmaplist} \end{array} \right\} \text{function } \text{list}^+ \right)$

▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left( \left\{ \begin{array}{l} \text{fmapcan} \\ \text{fmapcon} \end{array} \right\} \text{function } \widetilde{\text{list}}^+ \right)$

▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left( \left\{ \begin{array}{l} \text{fmapc} \\ \text{fmapl} \end{array} \right\} \text{function } \text{list}^+ \right)$

▷ Return first list after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

$(\text{fcopy-list } \text{list})$  ▷ Return copy of *list* with shared elements.

## 4.3 Association Lists

$(\text{fpairlis } \text{keys } \text{values} [\text{alist}_{\text{NIL}}])$

▷ Prepend to *alist* an association list made from lists *keys* and *values*.

$(\text{facons } \text{key } \text{value } \text{alist})$

▷ Return *alist* with a *(key . value)* pair added.

$\left( \left\{ \begin{array}{l} \text{fassoc} \\ \text{fassoc} \end{array} \right\} \text{foo } \text{alist} \left\{ \left\{ \begin{array}{l} \text{:test } \text{test}_{\text{#'=eq}} \\ \text{:test-not } \text{test} \\ \text{:key } \text{function} \end{array} \right\} \right\} \right)$

$\left( \left\{ \begin{array}{l} \text{fassoc-if[-not]} \\ \text{fassoc-if[-not]} \end{array} \right\} \text{test } \text{alist} [\text{:key } \text{function}] \right)$

▷ First cons whose *car*, or *cdr*, respectively, satisfies *test*.

$(\text{fcopy-alist } \text{alist})$  ▷ Return copy of *alist*.

## 4.4 Trees

(*f*tree-equal *foo bar* {*test* *test*<sub>#=eq</sub>  
{*test-not* *test*})

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

{*f*subst *new old tree* } {*test* *function*<sub>#=eq</sub>  
{*f*nsubst *new old tree* } {*test-not* *function*  
{*key* *function* }

▷ Make copy of *tree* with each subtree or leaf matching *old* replaced by *new*.

{*f*subst-if[-not] *new test tree* } [*key* *function*]  
{*f*nsubst-if[-not] *new test tree* }

▷ Make copy of *tree* with each subtree or leaf satisfying *test* replaced by *new*.

{*f*sublis *association-list tree* } {*test* *function*<sub>#=eq</sub>  
{*f*nsublis *association-list tree* } {*test-not* *function*  
{*key* *function* }

▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.

(*f*copy-tree *tree*) ▷ Copy of *tree* with same shape and leaves.

## 4.5 Sets

{*f*intersection  
{*f*set-difference  
{*f*union  
{*f*set-exclusive-or  
{*f*nintersection  
{*f*nset-difference  
{*f*nunion  
{*f*nset-exclusive-or

▷ Return  $a \cap b$ ,  $a \setminus b$ ,  $a \cup b$ , or  $a \Delta b$ , respectively, of lists *a* and *b*.

## 5 Arrays

### 5.1 Predicates

(*f*arrayp *foo*)  
(*f*vectorp *foo*)  
(*f*simple-vector-p *foo*) ▷ T if *foo* is of indicated type.  
(*f*bit-vector-p *foo*)  
(*f*simple-bit-vector-p *foo*)

(*f*adjustable-array-p *array*)  
(*f*array-has-fill-pointer-p *array*)  
▷ T if *array* is adjustable/has a fill pointer, respectively.

(*f*array-in-bounds-p *array* [*subscripts*])  
▷ Return T if *subscripts* are in *array*'s bounds.

### 5.2 Array Functions

{*f*make-array *dimension-sizes* [*adjustable* *bool*<sub>NIL</sub>]}  
{*f*adjust-array *array* *dimension-sizes*  
{*element-type* *type*<sub>NIL</sub>  
{*fill-pointer* {*num*|*bool*}<sub>NIL</sub>  
{*initial-element* *obj*  
{*initial-contents* *tree-or-array*  
{*displaced-to* *array*<sub>NIL</sub> [*displaced-index-offset* *i*<sub>0</sub>}]

▷ Return fresh, or readjust, respectively, vector or array.

(*f*aref *array* [*subscripts*])  
▷ Return array element pointed to by *subscripts*. **setfable**.

(*f*row-major-aref *array* *i*)  
▷ Return *i*th element of *array* in row-major order. **setfable**.

{*f*import  
{*f*shadowing-import

*symbols* [*package*<sub>v\*package\*</sub>])  
▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

(*f*shadow *symbols* [*package*<sub>v\*package\*</sub>])  
▷ Make *symbols* of *package* shadow any otherwise accessible, equally named symbols from other packages. Return T.

(*f*package-shadowing-symbols *package*)  
▷ List of symbols of *package* that shadow any otherwise accessible, equally named symbols from other packages.

(*f*export *symbols* [*package*<sub>v\*package\*</sub>])  
▷ Make *symbols* external to *package*. Return T.

(*f*unexport *symbols* [*package*<sub>v\*package\*</sub>])  
▷ Revert *symbols* to internal status. Return T.

{*m*do-symbols  
{*m*do-external-symbols } (*var* [*package*<sub>v\*package\*</sub> [*result*<sub>NIL</sub>]]) }  
{*m*do-all-symbols (*var* [*result*<sub>NIL</sub>]) }

(*declare* *decl*\*)\* {*tag*  
{*form* }\*)

▷ Evaluate *tagbody*-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of *result*. Implicitly, the whole form is a *block* named NIL.

(*m*with-package-iterator (*foo* *packages* [*:internal*|*:external*|*:inherited*])  
(*declare* *decl*\*)\* *form*<sup>P</sup>)  
▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (*:internal*, *:external*, or *:inherited*); and the package the symbol belongs to.

(*f*require *module* [*paths*<sub>NIL</sub>])  
▷ If not in *v\*modules\**, try *paths* to load *module* from. Signal **error** if unsuccessful. Deprecated.

(*f*provide *module*)  
▷ If not already there, add *module* to *v\*modules\**. Deprecated.

*v\*modules\** ▷ List of names of loaded modules.

## 14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

(*f*make-symbol *name*)  
▷ Make fresh, uninterned symbol *name*.

(*f*gensym [*s*<sub>0</sub>])  
▷ Return fresh, uninterned symbol *#:sn* with *n* from *v\*gensym-counter\**. Increment *v\*gensym-counter\**.

(*f*gentemp [*prefix*<sub>0</sub> [*package*<sub>v\*package\*</sub>]])  
▷ Intern fresh symbol in *package*. Deprecated.

(*f*copy-symbol *symbol* [*props*<sub>NIL</sub>])  
▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

(*f*symbol-name *symbol*)  
(*f*symbol-package *symbol*)  
(*f*symbol-plist *symbol*)  
(*f*symbol-value *symbol*)  
(*f*symbol-function *symbol*)  
▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

## 14 Packages and Symbols

The Loop Facility provides additional means of symbol handling; see `loop`, page 21.

### 14.1 Predicates

(*f*symbolp *foo*)  
 (*f*packagep *foo*)   ▷ T if *foo* is of indicated type.  
 (*f*keywordp *foo*)

### 14.2 Packages

*bar*|**keyword**:*bar*   ▷ Keyword, evaluates to *bar*.  
*package*:*symbol*   ▷ Exported *symbol* of *package*.  
*package*::*symbol*   ▷ Possibly unexported *symbol* of *package*.

(*m*defpackage *foo* {  
 (:nicknames *nick*\*)\*  
 (:documentation *string*)  
 (:intern *interned-symbol*)\*  
 (:use *used-package*)\*  
 (:import-from *pkg* *imported-symbol*)\*  
 (:shadowing-import-from *pkg* *shd-symbol*)\*  
 (:shadow *shd-symbol*)\*  
 (:export *exported-symbol*)\*  
 (:size *int*)  
 })

▷ Create or modify package *foo* with *interned-symbols*, symbols from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

(*f*make-package *foo* {  
 (:nicknames (*nick*\*)[NIL])  
 (:use (*used-package*\*)  
 })

▷ Create package *foo*.

(*f*rename-package *package* *new-name* [*new-nicknames*[NIL]])  
 ▷ Rename *package*. Return renamed package.

(*m*in-package *foo*)   ▷ Make package *foo* current.

{  
 (*f*use-package)  
 (*f*unuse-package)  
 } *other-packages* [*package*[\*package\*]])  
 ▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

(*f*package-use-list *package*)

(*f*package-used-by-list *package*)

▷ List of other packages used by/using *package*.

(*f*delete-package *package*)

▷ Delete *package*. Return T if successful.

\*package\*[common-lisp-user]   ▷ The current package.

(*f*list-all-packages)   ▷ List of registered packages.

(*f*package-name *package*)   ▷ Name of package.

(*f*package-nicknames *package*)   ▷ Nicknames of package.

(*f*find-package *name*)   ▷ Package with name (case-sensitive).

(*f*find-all-symbols *foo*)

▷ List of symbols *foo* from all registered packages.

{  
 (*f*intern)  
 (*f*find-symbol)  
 } *foo* [*package*[\*package\*]])

▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of :internal, :external, or :inherited (or NIL if *f*intern has created a fresh symbol).

(*f*unintern *symbol* [*package*[\*package\*]])

▷ Remove *symbol* from *package*, return T on success.

(*f*array-row-major-index *array* [*subscripts*])  
 ▷ Index in row-major order of the element denoted by *subscripts*.

(*f*array-dimensions *array*)  
 ▷ List containing the lengths of *array*'s dimensions.

(*f*array-dimension *array* *i*)  
 ▷ Length of *i*th dimension of *array*.

(*f*array-total-size *array*)   ▷ Number of elements in *array*.

(*f*array-rank *array*)   ▷ Number of dimensions of *array*.

(*f*array-displacement *array*)   ▷ Target array and offset.

(*f*bit *bit-array* [*subscripts*])

(*f*sbit *simple-bit-array* [*subscripts*])

▷ Return element of *bit-array* or of *simple-bit-array*. **setf**-able.

(*f*bit-not *bit-array* [*result-bit-array*[NIL]])

▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.

{  
 (*f*bit-eqv)  
 (*f*bit-and)  
 (*f*bit-andc1)  
 (*f*bit-andc2)  
 (*f*bit-nand)  
 (*f*bit-ior)  
 (*f*bit-orc1)  
 (*f*bit-orc2)  
 (*f*bit-xor)  
 (*f*bit-nor)  
 } *bit-array-a* *bit-array-b* [*result-bit-array*[NIL]])

▷ Return result of bitwise logical operations (cf. operations of *f*boole, page 4) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

*c*array-rank-limit   ▷ Upper bound of array rank; ≥ 8.

*c*array-dimension-limit

▷ Upper bound of an array dimension; ≥ 1024.

*c*array-total-size-limit   ▷ Upper bound of array size; ≥ 1024.

### 5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

(*f*vector *foo*\*)   ▷ Return fresh simple vector of *foos*.

(*f*svref *vector* *i*)   ▷ Element *i* of simple *vector*. **setf**-able.

(*f*vector-push *foo* *vector*)

▷ Return NIL if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.

(*f*vector-push-extend *foo* *vector* [*num*])

▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by ≥ *num* if necessary.

(*f*vector-pop *vector*)

▷ Return element of *vector* its fillpointer points to after decrementation.

(*f*fill-pointer *vector*)   ▷ Fill pointer of *vector*. **setf**-able.

## 6 Sequences

### 6.1 Sequence Predicates

$\left\{ \begin{array}{l} \text{every} \\ \text{notevery} \end{array} \right\} test\ sequence^+$

▷ Return NIL or T, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns NIL.

$\left\{ \begin{array}{l} \text{some} \\ \text{notany} \end{array} \right\} test\ sequence^+$

▷ Return value of *test* or NIL, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-NIL.

$(f\ mismatch\ sequence-a\ sequence-b\ \left\{ \begin{array}{l} \text{:from-end}\ bool_{\text{NIL}} \\ \text{:test}\ function_{\neq \text{NIL}} \\ \text{:test-not}\ function \\ \text{:start1}\ start-a_{\square} \\ \text{:start2}\ start-b_{\square} \\ \text{:end1}\ end-a_{\text{NIL}} \\ \text{:end2}\ end-b_{\text{NIL}} \\ \text{:key}\ function \end{array} \right\})$

▷ Return position in *sequence-a* where *sequence-a* and *sequence-b* begin to mismatch. Return NIL if they match entirely.

### 6.2 Sequence Functions

$(f\ make-sequence\ sequence-type\ size\ [:\text{initial-element}\ foo])$

▷ Make sequence of *sequence-type* with *size* elements.

$(f\ concatenate\ type\ sequence^*)$

▷ Return concatenated sequence of *type*.

$(f\ merge\ type\ \widetilde{sequence-a}\ \widetilde{sequence-b}\ test\ [:\text{key}\ function_{\text{NIL}}])$

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

$(f\ fill\ \widetilde{sequence}\ foo\ \left\{ \begin{array}{l} \text{:start}\ start_{\square} \\ \text{:end}\ end_{\text{NIL}} \end{array} \right\})$

▷ Return sequence after setting elements between *start* and *end* to *foo*.

$(f\ length\ sequence)$

▷ Return length of *sequence* (being value of fill pointer if applicable).

$(f\ count\ foo\ sequence\ \left\{ \begin{array}{l} \text{:from-end}\ bool_{\text{NIL}} \\ \text{:test}\ function_{\neq \text{NIL}} \\ \text{:test-not}\ function \\ \text{:start}\ start_{\square} \\ \text{:end}\ end_{\text{NIL}} \\ \text{:key}\ function \end{array} \right\})$

▷ Return number of elements in *sequence* which match *foo*.

$\left\{ \begin{array}{l} \text{count-if} \\ \text{count-if-not} \end{array} \right\} test\ sequence\ \left\{ \begin{array}{l} \text{:from-end}\ bool_{\text{NIL}} \\ \text{:start}\ start_{\square} \\ \text{:end}\ end_{\text{NIL}} \\ \text{:key}\ function \end{array} \right\})$

▷ Return number of elements in *sequence* which satisfy *test*.

$(f\ elt\ sequence\ index)$

▷ Return element of *sequence* pointed to by zero-indexed *index*. **setfable**.

$(f\ subseq\ sequence\ start\ [end_{\text{NIL}}])$

▷ Return subsequence of *sequence* between *start* and *end*. **setfable**.

$\left\{ \begin{array}{l} \text{sort} \\ \text{stable-sort} \end{array} \right\} \widetilde{sequence}\ test\ [:\text{key}\ function])$

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

$(f\ reverse\ sequence)$

▷ Return sequence in reverse order.

$(f\ nreverse\ \widetilde{sequence})$

$(f\ parse-namestring\ foo\ [host]$

$[default-pathname\ \underline{v*default-pathname-defaults*}]$   
 $\left. \left\{ \begin{array}{l} \text{:start}\ start_{\square} \\ \text{:end}\ end_{\text{NIL}} \\ \text{:junk-allowed}\ bool_{\text{NIL}} \end{array} \right\} \right] \right])$

▷ Return pathname converted from string, pathname, or stream *foo*; and position where parsing stopped.

$(f\ merge-pathnames\ path-or-stream$

$[default-path-or-stream\ \underline{v*default-pathname-defaults*}]$   
 $[default-version_{\text{newest}}])$

▷ Return pathname made by filling in components missing in *path-or-stream* from *default-path-or-stream*.

**v\*default-pathname-defaults\***

▷ Pathname to use if one is needed and none supplied.

$(f\ user-homedir-pathname\ [host])$

▷ User's home directory.

$(f\ enough-namestring\ path-or-stream$

$[root-path\ \underline{v*default-pathname-defaults*}])$

▷ Return minimal path string that sufficiently describes the path of *path-or-stream* relative to *root-path*.

$(f\ namestring\ path-or-stream)$

$(f\ file-namestring\ path-or-stream)$

$(f\ directory-namestring\ path-or-stream)$

$(f\ host-namestring\ path-or-stream)$

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path-or-stream*.

$(f\ translate-pathname\ path-or-stream\ wildcard-path-a$

$wildcard-path-b)$

▷ Translate the path of *path-or-stream* from *wildcard-path-a* into *wildcard-path-b*. Return new path.

$(f\ pathname\ path-or-stream)$

▷ Pathname of *path-or-stream*.

$(f\ logical-pathname\ logical-path-or-stream)$

▷ Logical pathname of *logical-path-or-stream*. Logical pathnames are represented as all-uppercase  
 $"[host:];[;]{\{dir\}^+};*\{name\}*\{type\}^+[\{LISP\}]\{version\}*\{newest\}|NEWEST]"$ .

$(f\ logical-pathname-translations\ logical-host)$

▷ List of (from-wildcard to-wildcard) translations for *logical-host*. **setfable**.

$(f\ load-logical-pathname-translations\ logical-host)$

▷ Load *logical-host*'s translations. Return NIL if already loaded; return T if successful.

$(f\ translate-logical-pathname\ path-or-stream)$

▷ Physical pathname corresponding to (possibly logical) pathname of *path-or-stream*.

$(f\ probe-file\ file)$

$(f\ truename\ file)$

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal **file-error**, respectively.

$(f\ file-write-date\ file)$

▷ Time at which *file* was last written.

$(f\ file-author\ file)$

▷ Return name of *file* owner.

$(f\ file-length\ stream)$

▷ Return length of *stream*.

$(f\ rename-file\ foo\ bar)$

▷ Rename file *foo* to *bar*. Unspecified components of path *bar* default to those of *foo*. Return new pathname, old physical file name, and new physical file name.

$(f\ delete-file\ file)$

▷ Delete *file*. Return T.

$(f\ directory\ path)$

▷ List of pathnames matching *path*.

$(f\ ensure-directories-exist\ path\ [:\text{verbose}\ bool])$

▷ Create parts of *path* if necessary. Second return value is T if something has been created.

(*f*close *stream* [:abort *bool*<sub>NIL</sub>])  
 ▷ Close *stream*. Return *T* if *stream* had been open. If :abort is *T*, delete associated file.

(*m*with-open-file (*stream path open-arg\**) (declare *decl\**)<sup>R</sup> *form\**)  
 ▷ Use *f*open with *open-args* to temporarily create *stream* to *path*; return values of forms.

(*m*with-open-stream (*foo stream*) (declare *decl\**)<sup>R</sup> *form\**)  
 ▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of forms.

(*m*with-input-from-string (*foo string*  $\left\{ \begin{array}{l} \text{:index } \textit{index} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \end{array} \right\}$ ) (declare *decl\**)<sup>R</sup> *form\**)  
 ▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of forms; store next reading position into *index*.

(*m*with-output-to-string (*foo*  $\left[ \begin{array}{l} \textit{string}_{\text{NIL}} \\ \text{:element-type } \textit{type}_{\text{character}} \end{array} \right]$ ) (declare *decl\**)<sup>R</sup> *form\**)  
 ▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(*f*stream-external-format *stream*)  
 ▷ External file format designator.

∗terminal-io\*    ▷ Bidirectional stream to user terminal.

∗standard-input\*

∗standard-output\*

∗error-output\*

▷ Standard input stream, standard output stream, or standard error output stream, respectively.

∗debug-io\*

∗query-io\*

▷ Bidirectional streams for debugging and user interaction.

## 13.7 Pathnames and Files

(*f*make-pathname  $\left\{ \begin{array}{l} \text{:host } \{ \textit{host} | \text{NIL} | \text{:unspecific} \} \\ \text{:device } \{ \textit{device} | \text{NIL} | \text{:unspecific} \} \\ \text{:directory } \left\{ \begin{array}{l} \{ \textit{directory} | \text{:wild} | \text{NIL} | \text{:unspecific} \} \\ \left\{ \begin{array}{l} \text{:absolute} \\ \text{:relative} \end{array} \right\} \left\{ \begin{array}{l} \textit{directory} \\ \text{:wild} \\ \text{:wild-inferiors} \\ \text{:up} \\ \text{:back} \end{array} \right\} \end{array} \right\} \\ \text{:name } \{ \textit{file-name} | \text{:wild} | \text{NIL} | \text{:unspecific} \} \\ \text{:type } \{ \textit{file-type} | \text{:wild} | \text{NIL} | \text{:unspecific} \} \\ \text{:version } \{ \text{:newest} | \textit{version} | \text{:wild} | \text{NIL} | \text{:unspecific} \} \\ \text{:defaults } \textit{path}_{\text{host from } \textit{v} \text{:default-pathname-defaults} \text{*}} \\ \text{:case } \{ \text{:local} | \text{:common} \}_{\text{local}} \end{array} \right\}$ )

▷ Construct a logical pathname if there is a logical pathname translation for *host*, otherwise construct a physical pathname. For :case :local, leave case of components unchanged. For :case :common, leave mixed-case components unchanged; convert all-uppercase components into local customary case; do the opposite with all-lowercase components.

$\left\{ \begin{array}{l} \textit{pathname-host} \\ \textit{pathname-device} \\ \textit{pathname-directory} \\ \textit{pathname-name} \\ \textit{pathname-type} \end{array} \right\}$  *path-or-stream* [:case  $\left\{ \begin{array}{l} \text{:local} \\ \text{:common} \end{array} \right\}$   $\left[ \text{local} \right]$ )]

(*f*pathname-version *path-or-stream*)

▷ Return pathname component.

$\left\{ \begin{array}{l} \textit{find} \\ \textit{position} \end{array} \right\}$  *foo sequence*  $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:test } \textit{function}_{\text{\#='eq}} \\ \text{:test-not } \textit{test} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\}$

▷ Return first element in *sequence* which matches *foo*, or its position relative to the begin of *sequence*, respectively.

$\left\{ \begin{array}{l} \textit{find-if} \\ \textit{find-if-not} \\ \textit{position-if} \\ \textit{position-if-not} \end{array} \right\}$  *test sequence*  $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

(*f*search *sequence-a sequence-b*  $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:test } \textit{function}_{\text{\#='eq}} \\ \text{:test-not } \textit{function} \\ \text{:start1 } \textit{start-a}_0 \\ \text{:start2 } \textit{start-b}_0 \\ \text{:end1 } \textit{end-a}_{\text{NIL}} \\ \text{:end2 } \textit{end-b}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\}$ )

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or NIL.

$\left\{ \begin{array}{l} \textit{remove } \textit{foo sequence} \\ \textit{delete } \textit{foo sequence} \end{array} \right\}$   $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \textit{f:test } \textit{function}_{\text{\#='eq}} \\ \text{:test-not } \textit{function} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \\ \text{:count } \textit{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence without elements matching *foo*.

$\left\{ \begin{array}{l} \textit{remove-if} \\ \textit{remove-if-not} \\ \textit{delete-if} \\ \textit{delete-if-not} \end{array} \right\}$  *test sequence*  $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \\ \text{:count } \textit{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* removed.

$\left\{ \begin{array}{l} \textit{remove-duplicates } \textit{sequence} \\ \textit{delete-duplicates } \textit{sequence} \end{array} \right\}$   $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \textit{f:test } \textit{function}_{\text{\#='eq}} \\ \text{:test-not } \textit{function} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \end{array} \right\}$

▷ Make copy of sequence without duplicates.

$\left\{ \begin{array}{l} \textit{substitute } \textit{new old sequence} \\ \textit{nsubstitute } \textit{new old sequence} \end{array} \right\}$   $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \textit{f:test } \textit{function}_{\text{\#='eq}} \\ \text{:test-not } \textit{function} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \\ \text{:count } \textit{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) *olds* replaced by *new*.

$\left\{ \begin{array}{l} \textit{substitute-if} \\ \textit{substitute-if-not} \\ \textit{nsubstitute-if} \\ \textit{nsubstitute-if-not} \end{array} \right\}$  *new test sequence*  $\left\{ \begin{array}{l} \text{:from-end } \textit{bool}_{\text{NIL}} \\ \text{:start } \textit{start}_0 \\ \text{:end } \textit{end}_{\text{NIL}} \\ \text{:key } \textit{function} \\ \text{:count } \textit{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* replaced by *new*.

(*f*replace *sequence-a sequence-b*  $\left\{ \begin{array}{l} \text{:start1 } \textit{start-a}_0 \\ \text{:start2 } \textit{start-b}_0 \\ \text{:end1 } \textit{end-a}_{\text{NIL}} \\ \text{:end2 } \textit{end-b}_{\text{NIL}} \end{array} \right\}$ )

▷ Replace elements of sequence-a with elements of sequence-b.

(*fmap* *type function sequence*<sup>+</sup>)

▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is `NIL`, return `NIL`.

(*fmap-into* *result-sequence function sequence*<sup>\*</sup>)

▷ Store into *result-sequence* successively values of *function* applied to corresponding elements of the *sequences*.

(*freduce* *function sequence*  $\left. \begin{array}{l} \text{:initial-value } foo_{\text{NIL}} \\ \text{:from-end } bool_{\text{NIL}} \\ \text{:start } start_{\text{NIL}} \\ \text{:end } end_{\text{NIL}} \\ \text{:key } function \end{array} \right\}$ )

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

(*fcopy-seq* *sequence*)

▷ Copy of *sequence* with shared elements.

## 7 Hash Tables

The Loop Facility provides additional hash table-related functionality; see `loop`, page 21.

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 9 and 16.

(*fhash-table-p* *foo*) ▷ Return `T` if *foo* is of type `hash-table`.

(*fmake-hash-table*  $\left. \begin{array}{l} \text{:test } \{f_{\text{eq}}|f_{\text{eql}}|f_{\text{equal}}|f_{\text{equalp}}\}_{\text{#\#eql}} \\ \text{:size } int \\ \text{:rehash-size } num \\ \text{:rehash-threshold } num \end{array} \right\}$ )

▷ Make a hash table.

(*fgethash* *key hash-table* [*default* `NIL`])

▷ Return object with *key* if any or *default* otherwise; and `T` if found, `NIL` otherwise. `setf`able.

(*fhash-table-count* *hash-table*)

▷ Number of entries in *hash-table*.

(*fremhash* *key hash-table*)

▷ Remove from *hash-table* entry with *key* and return `T` if it existed. Return `NIL` otherwise.

(*fclrhash* *hash-table*) ▷ Empty *hash-table*.

(*fmaphash* *function hash-table*)

▷ Iterate over *hash-table* calling *function* on key and value. Return `NIL`.

(*mwith-hash-table-iterator* (*foo hash-table*) (`declare decl*`)<sup>\*</sup> *form*<sub>P<sub>k</sub></sub>)

▷ Return values of forms. In *forms*, invocations of (*foo*) return: `T` if an entry is returned; its key; its value.

(*fhash-table-test* *hash-table*)

▷ Test function used in *hash-table*.

(*fhash-table-size* *hash-table*)

(*fhash-table-rehash-size* *hash-table*)

(*fhash-table-rehash-threshold* *hash-table*)

▷ Current size, rehash-size, or rehash-threshold, respectively, as used in *fmake-hash-table*.

(*fsxhash* *foo*)

▷ Hash code unique for any argument *fequal* *foo*.

## 13.6 Streams

(*fopen* *path*  $\left. \begin{array}{l} \text{:direction } \left\{ \begin{array}{l} \text{:input} \\ \text{:output} \\ \text{:io} \\ \text{:probe} \end{array} \right\} \\ \text{:element-type } \left\{ \begin{array}{l} \text{type} \\ \text{:default } \text{character} \end{array} \right\} \\ \text{:if-exists } \left\{ \begin{array}{l} \text{:new-version} \\ \text{:error} \\ \text{:rename} \\ \text{:rename-and-delete} \\ \text{:overwrite} \\ \text{:append} \\ \text{:supersede} \\ \text{NIL} \end{array} \right\} \\ \text{:if-does-not-exist } \left\{ \begin{array}{l} \text{:error} \\ \text{:create} \\ \text{NIL} \end{array} \right\} \\ \text{:external-format } \text{format}_{\text{default}} \end{array} \right\}$ )

▷ Open file-stream to *path*.

*new-version* if *path* specifies `:newest`; `NIL` otherwise

`NIL` for `:direction` `:probe`; `{:create:error}` otherwise

(*fmake-concatenated-stream* *input-stream*<sup>\*</sup>)

(*fmake-broadcast-stream* *output-stream*<sup>\*</sup>)

(*fmake-two-way-stream* *input-stream-part* *output-stream-part*)

(*fmake-echo-stream* *from-input-stream* *to-output-stream*)

(*fmake-synonym-stream* *variable-bound-to-stream*)

▷ Return stream of indicated type.

(*fmake-string-input-stream* *string* [*start* `0`] [*end* `NIL`])

▷ Return a string-stream supplying the characters from *string*.

(*fmake-string-output-stream* [*element-type* *type* `character`])

▷ Return a string-stream accepting characters (available via *fget-output-stream-string*).

(*fconcatenated-stream-streams* *concatenated-stream*)

(*fbroadcast-stream-streams* *broadcast-stream*)

▷ Return list of streams *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.

(*ftwo-way-stream-input-stream* *two-way-stream*)

(*ftwo-way-stream-output-stream* *two-way-stream*)

(*fecho-stream-input-stream* *echo-stream*)

(*fecho-stream-output-stream* *echo-stream*)

▷ Return source stream or sink stream of *two-way-stream/echo-stream*, respectively.

(*fsynonym-stream-symbol* *synonym-stream*)

▷ Return symbol of *synonym-stream*.

(*fget-output-stream-string* *string-stream*)

▷ Clear and return as a string characters on *string-stream*.

(*ffile-position* *stream*  $\left\{ \begin{array}{l} \text{:start} \\ \text{:end} \\ \text{position} \end{array} \right\}$ )

▷ Return position within stream, or set it to position and return `T` on success.

(*ffile-string-length* *stream* *foo*)

▷ Length *foo* would have in *stream*.

(*flisten* [*stream* `v.*standard-input*`])

▷ `T` if there is a character in input *stream*.

(*fclear-input* [*stream* `v.*standard-input*`])

▷ Clear input from *stream*, return `NIL`.

$\left\{ \begin{array}{l} f \text{clear-output} \\ f \text{force-output} \\ f \text{finish-output} \end{array} \right\}$  [*stream* `v.*standard-output*`])

▷ End output to *stream* and return `NIL` immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

- ~ [:] [C] < { [prefix<sub>mm</sub> ~:] | [per-line-prefix ~C:] } body [-; suffix<sub>mm</sub> ~:] [C] >
- ▷ **Logical Block.** Act like **pprint-logical-block** using *body* as *f***format** control string on the elements of the list argument or, with **C**, on the remaining arguments, which are extracted by **pprint-pop**. With **:**, *prefix* and *suffix* default to ( and ). When closed by ~C>, spaces in *body* are replaced with conditional newlines.
- {~ [n<sub>0</sub>] i | ~ [n<sub>0</sub>] :i}
- ▷ **Indent.** Set indentation to *n* relative to leftmost/to current position.
- ~ [c<sub>0</sub>] [,i<sub>0</sub>] [:] [C] T
- ▷ **Tabulate.** Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With **:**, calculate column numbers relative to the immediately enclosing section. With **C**, move to column number *c*<sub>0</sub> + *c* + *ki* where *c*<sub>0</sub> is the current position.
- {~ [m<sub>0</sub>] \* | ~ [m<sub>0</sub>] :\* | ~ [n<sub>0</sub>] C\* }
- ▷ **Go-To.** Jump *m* arguments forward, or backward, or to argument *n*.
- ~ [limit] [:] [C] { text ~ }
- ▷ **Iteration.** Use *text* repeatedly, up to *limit*, as control string for the elements of the list argument or (with **C**) for the remaining arguments. With **:** or **C**:, list elements or remaining arguments should be lists of which a new one is used at each iteration step.
- ~ [x [y [,z]]] ^
- ▷ **Escape Upward.** Leave immediately ~< ~>, ~< ~:>, ~{ ~}, ~?, or the entire *f***format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.
- ~ [i] [:] [C] [ [ {text ~;} \* text ] [~;; default] ~ ]
- ▷ **Conditional Expression.** Use the zero-indexed argument (or *i*th if given) *text* as a *f***format** control subclause. With **:**, use the first *text* if the argument value is NIL, or the second *text* if it is T. With **C**, do nothing for an argument value of NIL. Use the only *text* and leave the argument to be read again if it is T.
- {~?|~C?}
- ▷ **Recursive Processing.** Process two arguments as control string and argument list, or take one argument as control string and use then the rest of the original arguments.
- ~ [prefix {,prefix}\*] [:] [C] / [package [:] [c1-user:] function /
- ▷ **Call Function.** Call all-uppercase *package::function* with the arguments stream, format-argument, colon-p, at-sign-p and *prefixes* for printing format-argument.
- ~ [:] [C] W
- ▷ **Write.** Print argument of any type obeying every printer control variable. With **:**, pretty-print. With **C**, print without limits on length or depth.
- {V|#}
- ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

## 8 Structures

```
(mdefstruct
  (foo
    {
      :conc-name
      {(:conc-name [slot-prefixfoo])}
      :constructor
      {(:constructor [makerMAKE-foo] [(ord-λ*)])}
      :copier
      {(:copier [copierCOPY-foo])}
      (:include struct {
        slot
        {(:slot [init] {
          :type sl-type
          :read-only b
        })}
      })
      {(:type {
        list
        vector
        (vector type)
      })} [(initial-offset n̂)]
      {(:print-object [o-printer])}
      {(:print-function [f-printer])}
      :named
      {(:predicate [p-namefoo-p])}
    }
    {slot
      {(:slot [init] {
        :type slot-type
        :read-only bool
      })}
    }
  )
```

▷ Define structure *foo* together with functions *MAKE-foo*, *COPY-foo* and *foo-P*; and **setfable** accessors *foo-slot*. Instances are of class *foo* or, if **defstruct** option **:type** is given, of the specified type. They can be created by (*MAKE-foo* {*slot value*}\*) or, if *ord-λ* (see page 17) is given, by (*maker arg\** {*key value*}\*). In the latter case, *args* and *keys* correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a *g***print-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively. If **:type** without **:named** is given, no *foo-P* is created.

(*f*copy-structure *structure*)

▷ Return *copy of structure* with shared slot values.

## 9 Control Structure

### 9.1 Predicates

(*f*eq *foo bar*) ▷ **T** if *foo* and *bar* are identical.

(*f*eq1 *foo bar*) ▷ **T** if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

(*f*equal *foo bar*) ▷ **T** if *foo* and *bar* are *f***eq1**, or are equivalent **pathnames**, or are **conses** with *f***equal** cars and cdrs, or are **strings** or **bit-vectors** with *f***eq1** elements below their fill pointers.

(*f*equalp *foo bar*) ▷ **T** if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with *f***equalp** elements; or are structures of the same type with *f***equalp** elements; or are **hash-tables** of the same size with the same **:test** function, the same keys in terms of **:test** function, and *f***equalp** elements.

(*f*not *foo*) ▷ **T** if *foo* is NIL; **NIL** otherwise.

(*f*boundp *symbol*) ▷ **T** if *symbol* is a special variable.

(*f*constantp *foo* [*environment*]) ▷ **T** if *foo* is a constant form.

- (*f*functionp *foo*)      ▷ T if *foo* is of type **function**.
- (*f*fboundp  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ )      ▷ T if *foo* is a global function or macro.

## 9.2 Variables

- $\left\{ \begin{array}{l} \text{(mdefconstant)} \\ \text{(mdefparameter)} \end{array} \right\} \widehat{foo} \text{ form } [\widehat{doc}]$   
 ▷ Assign value of *form* to global constant/dynamic variable *foo*.
- (*m*defvar  $\widehat{foo}$  [*form* [*doc*]])  
 ▷ Unless bound already, assign value of *form* to dynamic variable *foo*.
- $\left\{ \begin{array}{l} \text{(msetf)} \\ \text{(mpsetf)} \end{array} \right\} \{ \text{place form} \}^*$   
 ▷ Set *places* to primary values of *forms*. Return values of last form/NIL; work sequentially/in parallel, respectively.
- $\left\{ \begin{array}{l} \text{(ssetq)} \\ \text{(mpsetq)} \end{array} \right\} \{ \text{symbol form} \}^*$   
 ▷ Set *symbols* to primary values of *forms*. Return value of last form/NIL; work sequentially/in parallel, respectively.
- (*f*set  $\widetilde{\text{symbol}}$  *foo*)      ▷ Set *symbol*'s value cell to *foo*. Deprecated.
- (*m*multiple-value-setq *vars form*)  
 ▷ Set elements of *vars* to the values of *form*. Return *form*'s primary value.
- (*m*shiftf  $\widehat{\text{place}}^+$  *foo*)  
 ▷ Store value of *foo* in rightmost *place* shifting values of *places* left, returning first *place*.
- (*m*rotatef  $\widehat{\text{place}}^*$ )  
 ▷ Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.
- (*f*makunbound  $\widetilde{\text{foo}}$ )      ▷ Delete special variable *foo* if any.
- (*f*get *symbol* *key* [*default* NIL])  
 (*f*getf *place* *key* [*default* NIL])  
 ▷ First entry *key* from property list stored in *symbol*/in *place*, respectively, or *default* if there is no *key*. **setfable**.
- (*f*get-properties *property-list* *keys*)  
 ▷ Return key and value of first entry from *property-list* matching a key from <sup>2</sup>*keys*, and tail of *property-list* starting with that key. Return NIL, NIL<sup>3</sup>, and NIL<sup>5</sup> if there was no matching key in *property-list*.
- (*f*remprop  $\widetilde{\text{symbol}}$  *key*)  
 (*m*remf  $\widehat{\text{place}}$  *key*)  
 ▷ Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.
- (*s*progv *symbols* *values* *form*<sup>P<sub>k</sub></sup>)  
 ▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of forms.
- $\left\{ \begin{array}{l} \text{(slet)} \\ \text{(slet*)} \end{array} \right\} \left( \left\{ \begin{array}{l} \text{name} \\ \text{(name [value NIL])} \end{array} \right\}^* \right) (\text{declare } \widehat{\text{decl}}^*)^* \text{ form}^{\text{P}_k}$   
 ▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.
- (*m*multiple-value-bind ( $\widehat{\text{var}}^*$ ) *values-form* (declare  $\widehat{\text{decl}}^*$ )<sup>P<sub>k</sub></sup> *body-form*<sup>P<sub>k</sub></sup>)  
 ▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

- $\sim [\text{min-col}] [\text{col-inc}] [\text{min-pad}] [\text{pad-char}]$   
 [:] [**Q**] [**A|S**]  
 ▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print NIL as () rather than nil; with **Q**, add *pad-chars* on the left rather than on the right.
- $\sim [\text{radix}] [\text{width}] [\text{pad-char}] [\text{comma-char}] [\text{comma-interval}]$  [:] [**Q**] **R**  
 ▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with **Q**, always prepend a sign.
- $\{ \sim \text{R} | \sim \text{R} | \sim \text{OR} | \sim \text{O} : \text{R} \}$   
 ▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.
- $\sim [\text{width}] [\text{pad-char}] [\text{comma-char}] [\text{comma-interval}]$  [:] [**Q**] [**D|B|O|X**]  
 ▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With :, group digits *comma-interval* each; with **Q**, always prepend a sign.
- $\sim [\text{width}] [\text{dec-digits}] [\text{shift}] [\text{overflow-char}] [\text{pad-char}]$  [**Q**] **F**  
 ▷ **Fixed-Format Floating-Point**. With **Q**, always prepend a sign.
- $\sim [\text{width}] [\text{dec-digits}] [\text{exp-digits}] [\text{scale-factor}] [\text{overflow-char}] [\text{pad-char}] [\text{exp-char}]$  [**Q**] [**E|G**]  
 ▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *dec-digits* after decimal point and *exp-digits* in the signed exponent. With **G**, choose either **E** or **F**. With **Q**, always prepend a sign.
- $\sim [\text{dec-digits}] [\text{int-digits}] [\text{width}] [\text{pad-char}]$  [:] [**Q**] **S**  
 ▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with **Q**, always prepend a sign.
- $\{ \sim \text{C} | \sim \text{C} | \sim \text{OC} | \sim \text{O} : \text{C} \}$   
 ▷ **Character**. Print, spell out, print in **#\** syntax, or tell how to type, respectively, argument as (possibly non-printing) character.
- $\{ \sim (\text{text } \sim) | \sim : (\text{text } \sim) | \sim \text{Q} (\text{text } \sim) | \sim \text{O} : (\text{text } \sim) \}$   
 ▷ **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.
- $\{ \sim \text{P} | \sim \text{P} | \sim \text{OP} | \sim \text{O} : \text{P} \}$   
 ▷ **Plural**. If argument *eq* 1 print nothing, otherwise print *s*; do the same for the previous argument; if argument *eq* 1 print *y*, otherwise print *ies*; do the same for the previous argument, respectively.
- $\sim [n] \%$       ▷ **Newline**. Print *n* newlines.
- $\sim [n] \&$   
 ▷ **Fresh-Line**. Print *n* – 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.
- $\{ \sim \_ | \sim \_ : | \sim \_ | \sim \_ : \_ \}$   
 ▷ **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.
- $\{ \sim \_ | \sim \_ : | \sim \_ | \sim \_ : \_ \}$   
 ▷ **Ignored Newline**. Ignore newline, or whitespace following newline, or both, respectively.
- $\sim [n] |$       ▷ **Page**. Print *n* page separators.
- $\sim [n] \sim$       ▷ **Tilde**. Print *n* tildes.
- $\sim [\text{min-col}] [\text{col-inc}] [\text{min-pad}] [\text{pad-char}]$   
 [:] [**Q**] < [*nl-text*  $\sim$  [*spare* NIL] [*width*]] :: { *text*  $\sim$ ; }<sup>\*</sup> *text*  $\sim$  >  
 ▷ **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With :, right justify; with **Q**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

$(f\text{pprint-newline } \left\{ \begin{array}{l} \text{:linear} \\ \text{:fill} \\ \text{:miser} \\ \text{:mandatory} \end{array} \right\} [stream \underline{v*standard-output*}])$   
 ▷ Print a conditional newline if *stream* is a pretty printing stream. Return NIL.

$v*print-array*$  ▷ If T, print arrays *f*readably.

$v*print-base*$ <sub>[T]</sub> ▷ Radix for printing rationals, from 2 to 36.

$v*print-case*$ <sub>[upcase]</sub>  
 ▷ Print symbol names all uppercase (:upcase), all lowercase (:downcase), capitalized (:capitalize).

$v*print-circle*$ <sub>[NIL]</sub>  
 ▷ If T, avoid indefinite recursion while printing circular structure.

$v*print-escape*$ <sub>[NIL]</sub>  
 ▷ If NIL, do not print escape characters and package prefixes.

$v*print-gensym*$ <sub>[NIL]</sub> ▷ If T, print #: before uninterned symbols.

$v*print-length*$ <sub>[NIL]</sub>

$v*print-level*$ <sub>[NIL]</sub>

$v*print-lines*$ <sub>[NIL]</sub>  
 ▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.

$v*print-miser-width*$   
 ▷ If integer and greater than the width available for printing a substructure, switch to the more compact miser style.

$v*print-pretty*$  ▷ If T, print prettily.

$v*print-radix*$ <sub>[NIL]</sub> ▷ If T, print rationals with a radix indicator.

$v*print-readably*$ <sub>[NIL]</sub>  
 ▷ If T, print *f*readably or signal error **print-not-readable**.

$v*print-right-margin*$ <sub>[NIL]</sub>  
 ▷ Right margin width in ems while pretty-printing.

$(f\text{set-pprint-dispatch } type \text{ function } [priority \subtable{v*print-pprint-dispatch*}])$   
 ▷ Install entry comprising *function* of arguments stream and object to print; and *priority* as *type* into *table*. If *function* is NIL, remove *type* from *table*. Return NIL.

$(f\text{pprint-dispatch } foo \text{ [table } \subtable{v*print-pprint-dispatch*}])$   
 ▷ Return highest priority *function* associated with type of *foo* and T if there was a matching type specifier in *table*.

$(f\text{copy-pprint-dispatch } [table \subtable{v*print-pprint-dispatch*}])$   
 ▷ Return copy of *table* or, if *table* is NIL, initial value of  $v*print-pprint-dispatch*$ .

$v*print-pprint-dispatch*$  ▷ Current pretty print dispatch table.

## 13.5 Format

$(m\text{formatter } \widehat{control})$   
 ▷ Return function of *stream* and *arg\** applying *f*format to *stream*, *control*, and *arg\** returning NIL or any excess *args*.

$(f\text{format } \{T|NIL|out-string|out-stream\} \text{ control } arg^*)$   
 ▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by *m*formatter which is then applied to *out-stream* and *arg\**. Output to *out-string*, *out-stream* or, if first argument is T, to  $v*standard-output*$ . Return NIL. If first argument is NIL, return formatted output.

$(m\text{destructuring-bind } destruct-\lambda \text{ bar } (\text{declare } \widehat{decl}^*)^* \text{ form}^s)$   
 ▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.

## 9.3 Functions

Below, ordinary lambda list (*ord-λ\**) has the form

$$(var^* [\&optional \left\{ (var [init \subtable{NIL}] [supplied-p]) \right\}^* ] [\&rest var] \\ [\&key \left\{ \left\{ (var (:key var)) [init \subtable{NIL}] [supplied-p] \right\}^* \right\} [\&allow-other-keys]] \\ [\&aux \left\{ (var [init \subtable{NIL}]) \right\}^* ])$$

*supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$$\left( \begin{array}{l} m\text{defun} \\ m\text{lambda} \end{array} \left\{ \begin{array}{l} foo (ord-\lambda^*) \\ (\text{setf } foo) (new-value ord-\lambda^*) \end{array} \right\} \left\{ \begin{array}{l} (\text{declare } \widehat{decl}^*) \\ \widehat{doc} \end{array} \right\} \right) \text{ form}^s$$

▷ Define a function named *foo* or (**setf** *foo*), or an anonymous function, respectively, which applies *forms* to *ord-λs*. For *m*defun, *forms* are enclosed in an implicit **s**block named *foo*.

$$\left( \begin{array}{l} s\text{flet} \\ s\text{labels} \end{array} \right) \left( \left\{ \begin{array}{l} foo (ord-\lambda^*) \\ (\text{setf } foo) (new-value ord-\lambda^*) \end{array} \right\} \left\{ \begin{array}{l} (\text{declare } \widehat{local-decl}^*)^* \\ \widehat{doc} \end{array} \right\} \text{ local-form}^s \right)^* (\text{declare } \widehat{decl}^*)^* \text{ form}^s$$

▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit **s**block around its corresponding *local-form\**. Only for **s**labels, functions *foo* are visible inside *local-forms*. Return values of *forms*.

$(s\text{function } \left\{ \begin{array}{l} foo \\ (m\text{lambda } form^*) \end{array} \right\})$   
 ▷ Return lexically innermost function named *foo* or a lexical closure of the *m*lambda expression.

$(f\text{apply } \left\{ \begin{array}{l} function \\ (\text{setf } function) \end{array} \right\} arg^* args)$   
 ▷ Values of function called with *args* and the list elements of *args*. **setfable** if *function* is one of *f*aref, *f*bit, and *f*sbit.

$(f\text{funcall } function \text{ arg}^*)$  ▷ Values of function called with *args*.

$(s\text{multiple-value-call } function \text{ form}^*)$   
 ▷ Call *function* with all the values of each *form* as its arguments. Return values returned by function.

$(f\text{values-list } list)$  ▷ Return elements of list.

$(f\text{values } foo^*)$   
 ▷ Return as multiple values the primary values of the *foos*. **setfable**.

$(f\text{multiple-value-list } form)$  ▷ List of the values of form.

$(m\text{nth-value } n \text{ form})$   
 ▷ Zero-indexed *n*th return value of *form*.

$(f\text{complement } function)$   
 ▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

$(f\text{constantly } foo)$   
 ▷ Function of any number of arguments returning *foo*.

$(f\text{identity } foo)$  ▷ Return *foo*.

(*f*function-lambda-expression *function*)  
 ▷ If available, return lambda expression of *function*, NIL if *function* was defined in an environment without bindings, and name of *function*.

(*f*definition  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ )

▷ Definition of global function *foo*. setfable.

(*f*makunbound *foo*)

▷ Remove global function or macro definition foo.

ccall-arguments-limit

lambda-parameters-limit

▷ Upper bound of the number of function arguments or lambda list parameters, respectively;  $\geq 50$ .

multiple-values-limit

▷ Upper bound of the number of values a multiple value can have;  $\geq 20$ .

## 9.4 Macros

Below, macro lambda list (*macro-λ\**) has the form of either

(&whole *var* [*E*]  $\left\{ \begin{array}{l} \text{var} \\ \text{(macro-λ*)} \end{array} \right\}^* [E]$ )

(&optional  $\left\{ \begin{array}{l} \text{var} \\ \left\{ \begin{array}{l} \text{var} \\ \text{(macro-λ*)} \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \end{array} \right\}^* [E]$ )

(&rest  $\left\{ \begin{array}{l} \text{rest-var} \\ \text{(macro-λ*)} \end{array} \right\} [E]$ )

(&key  $\left\{ \begin{array}{l} \text{var} \\ \left\{ \begin{array}{l} \text{var} \\ \text{(key } \left\{ \begin{array}{l} \text{var} \\ \text{(macro-λ*)} \end{array} \right\}) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \end{array} \right\}^* [E]$ )

(&allow-other-keys] [&aux  $\left\{ \begin{array}{l} \text{var} \\ \text{(var } [init_{\text{NIL}}]) \end{array} \right\}^* [E]$ )

or

(&whole *var* [*E*]  $\left\{ \begin{array}{l} \text{var} \\ \text{(macro-λ*)} \end{array} \right\}^* [E]$  [&optional

$\left\{ \begin{array}{l} \text{var} \\ \left\{ \begin{array}{l} \text{var} \\ \text{(macro-λ*)} \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \end{array} \right\}^* [E]$  . *rest-var*).

One toplevel [*E*] may be replaced by &environment *var*. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

(mdefmacro  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\} \text{(macro-λ*)}$   
 $\left\{ \begin{array}{l} \text{(declare } \widehat{\text{decl}}^* \text{)*} \\ \text{doc} \end{array} \right\} \text{form}^{\text{P}^*}$ )

▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree-shaped macro-λs*. *forms* are enclosed in an implicit block named *foo*.

(mdefine-symbol-macro *foo form*)

▷ Define symbol macro foo which on evaluation evaluates expanded *form*.

(smacrolet ((*foo* (macro-λ\*)  $\left\{ \begin{array}{l} \text{(declare } \widehat{\text{local-decl}}^* \text{)*} \\ \text{doc} \end{array} \right\}$ ))

*macro-form*<sup>P\*</sup>) (declare  $\widehat{\text{decl}}^*$ ) *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit blocks of the same name.

(ssymbol-macrolet ((*foo expansion-form*)\*) (declare  $\widehat{\text{decl}}^*$ ) *form*<sup>P\*</sup>)  
 ▷ Evaluate *forms* with locally defined symbol macros *foo*.

(mdefsetf *function*  $\left\{ \begin{array}{l} \widehat{\text{updater}} [\widehat{\text{doc}}] \\ \text{(setf-λ*)} (s\text{-var}^*) \left\{ \begin{array}{l} \text{(declare } \widehat{\text{decl}}^* \text{)*} \\ \text{doc} \end{array} \right\} \text{form}^{\text{P}^*} \end{array} \right\}$ )  
 where defsetf lambda list (*setf-λ\**) has the form

(*f*write-char *char*  $\left[ \widehat{\text{stream}}_{\text{v}^* \text{standard-output}^*} \right]$ )  
 ▷ Output *char* to *stream*.

( $\left\{ \begin{array}{l} \text{fwrite-string} \\ \text{fwrite-line} \end{array} \right\}$  *string*  $\left[ \widehat{\text{stream}}_{\text{v}^* \text{standard-output}^*} \left[ \left\{ \begin{array}{l} \text{:start } start_{\text{0}} \\ \text{:end } end_{\text{NIL}} \end{array} \right\} \right] \right]$ )  
 ▷ Write *string* to *stream* without/with a trailing newline.

(*f*write-byte *byte*  $\widehat{\text{stream}}$ ) ▷ Write *byte* to binary *stream*.

(*f*write-sequence *sequence*  $\widehat{\text{stream}} \left\{ \begin{array}{l} \text{:start } start_{\text{0}} \\ \text{:end } end_{\text{NIL}} \end{array} \right\}$ )  
 ▷ Write elements of *sequence* to binary or character *stream*.

( $\left\{ \begin{array}{l} \text{fwrite} \\ \text{fwrite-to-string} \end{array} \right\}$  *foo*  $\left\{ \begin{array}{l} \text{:array } bool \\ \text{:base } radix \\ \text{:case } \left\{ \begin{array}{l} \text{:upcase} \\ \text{:downcase} \\ \text{:capitalize} \end{array} \right\} \\ \text{:circle } bool \\ \text{:escape } bool \\ \text{:gensym } bool \\ \text{:length } \{int|NIL\} \\ \text{:level } \{int|NIL\} \\ \text{:lines } \{int|NIL\} \\ \text{:miser-width } \{int|NIL\} \\ \text{:pprint-dispatch } dispatch\text{-table} \\ \text{:pretty } bool \\ \text{:radix } bool \\ \text{:readably } bool \\ \text{:right-margin } \{int|NIL\} \\ \text{:stream } \widehat{\text{stream}}_{\text{v}^* \text{standard-output}^*} \end{array} \right\}$ )

▷ Print *foo* to *stream* and return foo, or print *foo* into *string*, respectively, after dynamically setting printer variables corresponding to keyword parameters (\*print-bar\* becoming *bar*). (:stream keyword with *f*write only.)

(*f*pprint-fill  $\widehat{\text{stream}}$  *foo* [*parenthesis*<sub>0</sub>] [*noop*])

(*f*pprint-tabular  $\widehat{\text{stream}}$  *foo* [*parenthesis*<sub>0</sub>] [*noop*] [*n*<sub>0</sub>])

(*f*pprint-linear  $\widehat{\text{stream}}$  *foo* [*parenthesis*<sub>0</sub>] [*noop*])

▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return NIL. Usable with *f*format directive ~//.

(*m*pprint-logical-block ( $\widehat{\text{stream}}$  *list*  $\left\{ \begin{array}{l} \text{:prefix } string \\ \text{:per-line-prefix } string \\ \text{:suffix } string_{\text{0}} \end{array} \right\}$ ))

(declare  $\widehat{\text{decl}}^*$ ) *form*<sup>P\*</sup>)

▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by *f*write. Return NIL.

(*m*pprint-pop)

▷ Take next element off *list*. If there is no remaining tail of *list*, or v\*print-length\* or v\*print-circle\* indicate printing should end, send element together with an appropriate indicator to *stream*.

(*f*pprint-tab  $\left\{ \begin{array}{l} \text{:line} \\ \text{:line-relative} \\ \text{:section} \\ \text{:section-relative} \end{array} \right\} c i [\widehat{\text{stream}}_{\text{v}^* \text{standard-output}^*}]$ )

▷ Move cursor forward to column number  $c + ki$ ,  $k \geq 0$  being as small as possible.

(*f*pprint-indent  $\left\{ \begin{array}{l} \text{:block} \\ \text{:current} \end{array} \right\} n [\widehat{\text{stream}}_{\text{v}^* \text{standard-output}^*}]$ )

▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return NIL.

(*m*pprint-exit-if-list-exhausted)

▷ If *list* is empty, terminate logical block. Return NIL otherwise.

- $n/d$       ▷ The **ratio**  $\frac{n}{d}$ .
- $\{[m].n[\{S|F|D|L|E\}x_{\text{EQL}}]|m.[.n]\{S|F|D|L|E\}x\}$   
 ▷  $m.n \cdot 10^x$  as **short-float**, **single-float**, **double-float**, **long-float**, or the type from **\*read-default-float-format\***.
- #C**( $a\ b$ )      ▷ ( $\_f$ **complex**  $a\ b$ ), the complex number  $a + bi$ .
- #'foo**      ▷ ( $\_s$ **function**  $foo$ ); the function named  $foo$ .
- #nAsequence**      ▷  $n$ -dimensional array.
- #[n](foo\*)**  
 ▷ Vector of some (or  $n$ )  $foos$  filled with last  $foo$  if necessary.
- #[n]\*b\***  
 ▷ Bit vector of some (or  $n$ )  $bs$  filled with last  $b$  if necessary.
- #S**( $type\ \{slot\ value\}^*$ )      ▷ Structure of  $type$ .
- #Pstring**      ▷ A pathname.
- #:foo**      ▷ Uninterned symbol  $foo$ .
- #.form**      ▷ Read-time value of  $form$ .
- √\*read-eval\***<sub>□</sub>      ▷ If NIL, a **reader-error** is signalled at **#.**
- #integer= foo**      ▷ Give  $foo$  the label  $integer$ .
- #integer#**      ▷ Object labelled  $integer$ .
- #<**      ▷ Have the reader signal **reader-error**.
- #+feature when-feature**  
**#-feature unless-feature**  
 ▷ Means  $when-feature$  if  $feature$  is T; means  $unless-feature$  if  $feature$  is NIL.  $feature$  is a symbol from **√\*features\***, or (**{and** | **or** }  $feature^*$ ), or (**not**  $feature$ ).
- √\*features\***  
 ▷ List of symbols denoting implementation-dependent features.
- |c\*|; \c**  
 ▷ Treat arbitrary character(s)  $c$  as alphabetic preserving case.

## 13.4 Printer

- $\left( \begin{array}{l} \_f\text{prin1} \\ \_f\text{print} \\ \_f\text{pprint} \\ \_f\text{princ} \end{array} \right) foo\ [\widetilde{stream}_{\_v*standard-output*}]$   
 ▷ Print  $foo$  to  $stream$   $\_f$ **readably**,  $\_f$ **readably** between a newline and a space,  $\_f$ **readably** after a newline, or human-readably without any extra characters, respectively.  $\_f\text{prin1}$ ,  $\_f\text{print}$  and  $\_f\text{princ}$  return  $\underline{foo}$ .
- ( $\_f\text{prin1-to-string}\ foo$ )  
 ( $\_f\text{princ-to-string}\ foo$ )  
 ▷ Print  $foo$  to  $\underline{string}$   $\_f$ **readably** or human-readably, respectively.
- ( $\_g\text{print-object}\ object\ \widetilde{stream}$ )  
 ▷ Print  $\underline{object}$  to  $\underline{stream}$ . Called by the Lisp printer.
- ( $\_m\text{print-unreadable-object}\ (foo\ \widetilde{stream}\ \left\{ \begin{array}{l} \_t:\text{type}\ \text{bool}_{\text{NIL}} \\ \_i:\text{identity}\ \text{bool}_{\text{NIL}} \end{array} \right\})\ form^{\text{P}_k}$ )  
 ▷ Enclosed in **#<** and **>**, print  $foo$  by means of  $forms$  to  $\underline{stream}$ . Return **NIL**.
- ( $\_f\text{terpri}\ [\widetilde{stream}_{\_v*standard-output*}]$ )  
 ▷ Output a newline to  $\underline{stream}$ . Return **NIL**.
- ( $\_f\text{fresh-line}\ [\widetilde{stream}_{\_v*standard-output*}]$ )  
 ▷ Output a newline to  $\underline{stream}$  and return **T** unless  $\underline{stream}$  is already at the start of a line.

- $(var^* [\&\text{optional}\ \left\{ \begin{array}{l} var \\ (var\ [init_{\text{NIL}}\ [supplied-p]]) \end{array} \right\}^* ] [\&\text{rest}\ var]$   
 $[\&\text{key}\ \left\{ \begin{array}{l} var \\ ((:key\ var)\ [init_{\text{NIL}}\ [supplied-p]]) \end{array} \right\}^* ]$   
 $[\&\text{allow-other-keys}] [\&\text{environment}\ var])$   
 ▷ Specify how to **setf** a place accessed by  $\underline{function}$ .  
**Short form:** (**setf** ( $\underline{function}\ arg^*$ )  $\underline{value-form}$ ) is replaced by ( $\underline{updater}\ arg^*\ \underline{value-form}$ ); the latter must return  $\underline{value-form}$ .  
**Long form:** on invocation of (**setf** ( $\underline{function}\ arg^*$ )  $\underline{value-form}$ ),  $\underline{forms}$  must expand into code that sets the place accessed where  $\underline{setf-lambda}$  and  $\underline{s-var}^*$  describe the arguments of  $\underline{function}$  and the value(s) to be stored, respectively; and that returns the value(s) of  $\underline{s-var}^*$ .  $\underline{forms}$  are enclosed in an implicit  $\_s$ **block** named  $\underline{function}$ .

( $\_m\text{define-setf-expander}\ function\ (macro-\lambda^*)\ \left\{ \left( \underline{\text{declare}}\ \widehat{\underline{decl}}^* \right) \right\}$   
 $\left[ \underline{\text{doc}} \right]$ )

$form^{\text{P}_k}$

- ▷ Specify how to **setf** a place accessed by  $\underline{function}$ . On invocation of (**setf** ( $\underline{function}\ arg^*$ )  $\underline{value-form}$ ),  $\underline{form}^*$  must expand into code returning  $\underline{arg-vars}$ ,  $\underline{args}$ ,  $\underline{newval-vars}$ ,  $\underline{set-form}$ , and  $\underline{get-form}$  as described with  $\_f$ **get-setf-expansion** where the elements of macro lambda list  $\underline{macro-\lambda}^*$  are bound to corresponding  $\underline{args}$ .  $\underline{forms}$  are enclosed in an implicit  $\_s$ **block** named  $\underline{function}$ .

( $\_f\text{get-setf-expansion}\ place\ [environment_{\text{NIL}}]$ )

- ▷ Return lists of temporary variables  $\underline{arg-vars}$  and of corresponding  $\underline{args}$  as given with  $\underline{place}$ , list  $\underline{newval-vars}$  with temporary variables corresponding to the  $\underline{new}$  values, and  $\underline{set-form}$  and  $\underline{get-form}$  specifying in terms of  $\underline{arg-vars}$  and  $\underline{newval-vars}$  how to **setf** and how to read  $\underline{place}$ .

( $\_m\text{define-modify-macro}\ foo\ ([\&\text{optional}$

$\left\{ \begin{array}{l} var \\ (var\ [init_{\text{NIL}}\ [supplied-p]]) \end{array} \right\}^* [\&\text{rest}\ var])\ function\ [\widehat{\underline{doc}}]$ )

- ▷ Define macro  $\underline{foo}$  able to modify a place. On invocation of ( $\underline{foo}\ place\ arg^*$ ), the value of  $\underline{function}$  applied to  $\underline{place}$  and  $\underline{args}$  will be stored into  $\underline{place}$  and returned.

## λlambda-list-keywords

- ▷ List of macro lambda list keywords. These are at least:

**&whole**  $var$

- ▷ Bind  $var$  to the entire macro call form.

**&optional**  $var^*$

- ▷ Bind  $\underline{vars}$  to corresponding arguments if any.

**{&rest|&body}**  $var$

- ▷ Bind  $var$  to a list of remaining arguments.

**&key**  $var^*$

- ▷ Bind  $\underline{vars}$  to corresponding keyword arguments.

**&allow-other-keys**

- ▷ Suppress keyword argument checking. Callers can do so using **:allow-other-keys T**.

**&environment**  $var$

- ▷ Bind  $var$  to the lexical compilation environment.

**&aux**  $var^*$

- ▷ Bind  $\underline{vars}$  as in **let\***.

## 9.5 Control Flow

( $\_s\text{if}\ test\ then\ [else_{\text{NIL}}]$ )

- ▷ Return values of  $\underline{then}$  if  $\underline{test}$  returns T; return values of  $\underline{else}$  otherwise.

( $\_m\text{cond}\ (test\ then^*_{\text{NIL}})^*$ )

- ▷ Return the values of the first  $\underline{then}^*$  whose  $\underline{test}$  returns T; return **NIL** if all  $\underline{tests}$  return NIL.

$\left( \begin{array}{l} \_m\text{when} \\ \_m\text{unless} \end{array} \right) test\ \underline{foo}^{\text{P}_k}$

- ▷ Evaluate  $\underline{foos}$  and return  $\underline{their\ values}$  if  $\underline{test}$  returns T or NIL, respectively. Return **NIL** otherwise.

(*m*case test ( $\widehat{\text{key}}$ )  $\text{foo}^{\text{P}}$ \*) [ $\left(\begin{array}{l} \text{otherwise} \\ \text{T} \end{array}\right)$   $\text{bar}^{\text{P}}$ \*)  
 ▷ Return the values of the first *foo*\* one of whose *keys* is **eq** *test*. Return values of bars if there is no matching *key*.

( $\begin{array}{l} \text{m} \\ \text{m} \end{array}$ ecase) test ( $\widehat{\text{key}}$ )  $\text{foo}^{\text{P}}$ \*)  
 ▷ Return the values of the first *foo*\* one of whose *keys* is **eq** *test*. Signal non-correctable/correctable **type-error** if there is no matching *key*.

(*m*and *form*\*<sub>T</sub>)  
 ▷ Evaluate *forms* from left to right. Immediately return **NIL** if one *form*'s value is **NIL**. Return values of last *form* otherwise.

(*m*or *form*\*<sub>NIL</sub>)  
 ▷ Evaluate *forms* from left to right. Immediately return primary value of first non-**NIL**-evaluating form, or all values if last *form* is reached. Return **NIL** if no *form* returns **T**.

(*s*progn *form*\*<sub>NIL</sub>)  
 ▷ Evaluate *forms* sequentially. Return values of last *form*.

(*s*multiple-value-prog1 *form-r form*\*)

(*m*prog1 *form-r form*\*)

(*m*prog2 *form-a form-r form*\*)

▷ Evaluate forms in order. Return values/primary value, respectively, of *form-r*.

( $\begin{array}{l} \text{m} \\ \text{m} \end{array}$ prog) ( $\left(\begin{array}{l} \text{name} \\ \text{name} \text{ [value}_{\text{NIL}} \end{array}\right)$ )\* (declare  $\widehat{\text{decl}}$ )\* ( $\widehat{\text{tag}}$   $\widehat{\text{form}}$ )\*  
 ▷ Evaluate *s*tagbody-like body with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return **NIL** or explicitly *m*returned values. Implicitly, the whole form is a *s*block named **NIL**.

(*s*unwind-protect *protected cleanup*\*)  
 ▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of *protected*.

(*s*block *name form*\*<sub>P</sub>)  
 ▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by *s*return-from.

(*s*return-from *foo* [*result*]<sub>NIL</sub>)

(*m*return [*result*]<sub>NIL</sub>)

▷ Have nearest enclosing *s*block named *foo*/named **NIL**, respectively, return with values of *result*.

(*s*tagbody { $\widehat{\text{tag}}$   $\widehat{\text{form}}$ })\*

▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for *s*go. Return **NIL**.

(*s*go  $\widehat{\text{tag}}$ )

▷ Within the innermost possible enclosing *s*tagbody, jump to a tag *f*eq *tag*.

(*s*catch *tag form*\*<sub>P</sub>)

▷ Evaluate *forms* and return their values unless interrupted by *s*throw.

(*s*throw *tag form*)

▷ Have the nearest dynamically enclosing *s*catch with a tag *f*eq *tag* return with the values of *form*.

(*f*sleep *n*) ▷ Wait *n* seconds; return **NIL**.

(*f*read-sequence  $\widehat{\text{sequence}}$   $\widehat{\text{stream}}$  [:start *start*]<sub>T</sub>[:end *end*]<sub>NIL</sub>)  
 ▷ Replace elements of *sequence* between *start* and *end* with elements from binary or character *stream*. Return index of *sequence*'s first unmodified element.

(*f*readtable-case *readtable*)<sub>upcase</sub>  
 ▷ Case sensitivity attribute (one of :upcase, :downcase, :preserve, :invert) of *readtable*. settable.

(*f*copy-readtable [*from-readtable*  $\widehat{\text{v-readtable}}$  [*to-readtable*]<sub>NIL</sub>])  
 ▷ Return copy of *from-readtable*.

(*f*set-syntax-from-char *to-char from-char* [*to-readtable*  $\widehat{\text{v-readtable}}$  [*from-readtable* standard-readtable]])  
 ▷ Copy syntax of *from-char* to *to-readtable*. Return **T**.

**v-readtable\*** ▷ Current readtable.

**v-read-base\***<sub>T</sub> ▷ Radix for reading **integers** and **ratios**.

**v-read-default-float-format\***<sub>single-float</sub>  
 ▷ Floating point format to use when not indicated in the number read.

**v-read-suppress\***<sub>NIL</sub>  
 ▷ If **T**, reader is syntactically more tolerant.

(*f*set-macro-character *char function* [*non-term-p*]<sub>NIL</sub> [ $\widehat{\text{rt}}$   $\widehat{\text{v-readtable}}$ ])  
 ▷ Make *char* a macro character associated with *function* of stream and *char*. Return **T**.

(*f*get-macro-character *char* [ $\widehat{\text{rt}}$   $\widehat{\text{v-readtable}}$ ])  
 ▷ Reader macro function associated with *char*, and **T** if *char* is a non-terminating macro character.

(*f*make-dispatch-macro-character *char* [*non-term-p*]<sub>NIL</sub> [ $\widehat{\text{rt}}$   $\widehat{\text{v-readtable}}$ ])  
 ▷ Make *char* a dispatching macro character. Return **T**.

(*f*set-dispatch-macro-character *char sub-char function* [ $\widehat{\text{rt}}$   $\widehat{\text{v-readtable}}$ ])  
 ▷ Make *function* of stream, *n*, *sub-char* a dispatch function of *char* followed by *n*, followed by *sub-char*. Return **T**.

(*f*get-dispatch-macro-character *char sub-char* [ $\widehat{\text{rt}}$   $\widehat{\text{v-readtable}}$ ])  
 ▷ Dispatch function associated with *char* followed by *sub-char*.

### 13.3 Character Syntax

#| *multi-line-comment*\* |#

; *one-line-comment*\*

▷ Comments. There are stylistic conventions:

;;; <i>title</i>	▷ Short title for a block of code.
;; <i>intro</i>	▷ Description before a block of code.
:: <i>state</i>	▷ State of program or of following code.
; <i>explanation</i>	▷ Regarding line on which it appears.
; <i>continuation</i>	

(*foo*\*[. *bar*]<sub>NIL</sub>) ▷ List of *foos* with the terminating cdr *bar*.

" ▷ Begin and end of a string.

'*foo* ▷ (*s*quote *foo*); *foo* unevaluated.

`([*foo*] [*bar*] [*@baz*] [*..quux*] [*bing*])  
 ▷ Backquote. *s*quote *foo* and *bing*; evaluate *bar* and splice the lists *baz* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

#\c ▷ (*f*character "c"), the character *c*.

#B*n*; #O*n*; *n*.; #X*n*; #rR*n*

▷ Integer of radix 2, 8, 10, 16, or *r*;  $2 \leq r \leq 36$ .

## 13 Input/Output

### 13.1 Predicates

(*f*stream-p *foo*)

(*f*pathname-p *foo*) ▷ T if *foo* is of indicated type.

(*f*readtable-p *foo*)

(*f*input-stream-p *stream*)

(*f*output-stream-p *stream*)

(*f*interactive-stream-p *stream*)

(*f*open-stream-p *stream*)

▷ Return T if *stream* is for input, for output, interactive, or open, respectively.

(*f*pathname-match-p *path wildcard*)

▷ T if *path* matches *wildcard*.

(*f*wild-pathname-p *path* [{:host|:device|:directory|:name|:type|:version|NIL}])

▷ Return T if indicated component in *path* is wildcard. (NIL indicates any component.)

### 13.2 Reader

{*f*y-or-n-p  
*f*yes-or-no-p} [*control arg\**]

▷ Ask user a question and return T or NIL depending on their answer. See page 36, *f*format, for *control* and *args*.

(*m*with-standard-io-syntax *form*<sup>R</sup>)

▷ Evaluate *forms* with standard behaviour of reader and printer. Return values of forms.

{*f*read  
*f*read-preserving-whitespace} [*stream* v\*standard-input\* [*eof-err* eof-val recursive]]])

▷ Read printed representation of object.

(*f*read-from-string *string* [*eof-error* eof-val]

{[:start *start*  
:end *end*  
:preserve-whitespace *bool*]}])

▷ Return object read from string and zero-indexed position of next character.

(*f*read-delimited-list *char* [*stream* v\*standard-input\* [*recursive*]])

▷ Continue reading until encountering *char*. Return list of objects read. Signal error if no *char* is found in stream.

(*f*read-char [*stream* v\*standard-input\* [*eof-err* eof-val recursive]])

▷ Return next character from *stream*.

(*f*read-char-no-hang [*stream* v\*standard-input\* [*eof-error* eof-val recursive]])

▷ Next character from *stream* or NIL if none is available.

(*f*peek-char [*mode* stream v\*standard-input\* [*eof-error* eof-val recursive]])

▷ Next, or if *mode* is T, next non-whitespace character, or if *mode* is a character, next instance of it, from *stream* without removing it there.

(*f*unread-char *character* [*stream* v\*standard-input\*])

▷ Put last *f*read-chared *character* back into *stream*; return NIL.

(*f*read-byte *stream* [*eof-err* eof-val])

▷ Read next byte from binary *stream*.

(*f*read-line [*stream* v\*standard-input\* [*eof-err* eof-val recursive]])

▷ Return a line of text from *stream* and T if line has been ended by end of file.

## 9.6 Iteration

{*m*do  
*m*do\*} ({*var* [*start* [*step*]]})<sup>\*</sup> (*stop result*<sup>R</sup>) (*declare decl*<sup>\*</sup>)<sup>\*</sup>  
{*tag* *form*}<sup>\*</sup>)

▷ Evaluate *stagbody*-like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is T. Return values of result<sup>\*</sup>. Implicitly, the whole form is a *sblock* named NIL.

(*m*dotimes (*var i* [*result* nil]) (*declare decl*<sup>\*</sup>)<sup>\*</sup> {*tag* *form*}<sup>\*</sup>)

▷ Evaluate *stagbody*-like body with *var* successively bound to integers from 0 to *i* - 1. Upon evaluation of *result*, *var* is *i*. Implicitly, the whole form is a *sblock* named NIL.

(*m*dolist (*var list* [*result* nil]) (*declare decl*<sup>\*</sup>)<sup>\*</sup> {*tag* *form*}<sup>\*</sup>)

▷ Evaluate *stagbody*-like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is NIL. Implicitly, the whole form is a *sblock* named NIL.

## 9.7 Loop Facility

(*m*loop *form*<sup>\*</sup>)

▷ **Simple Loop.** If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit *sblock* named NIL.

(*m*loop *clause*<sup>\*</sup>)

▷ **Loop Facility.** For Loop Facility keywords see below and Figure 1.

**named** *n*nil ▷ Give *mloop*'s implicit *sblock* a name.

{*with* {*var-s*  
(*var-s*<sup>\*</sup>)} [*d-type*] [= *foo*]}<sup>+</sup>

{*and* {*var-p*  
(*var-p*<sup>\*</sup>)} [*d-type*] [= *bar*]}<sup>\*</sup>

where destructuring type specifier *d-type* has the form

{*fixnum*|*float*|T|NIL}{*of-type* {*type*  
(*type*<sup>\*</sup>)}}

▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.

{*for*|*as*} {*var-s*  
(*var-s*<sup>\*</sup>)} [*d-type*]<sup>+</sup> {*and* {*var-p*  
(*var-p*<sup>\*</sup>)} [*d-type*]}<sup>\*</sup>

▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.

{*upfrom*|*from*|*downfrom*} *start*

▷ Start stepping with *start*

{*upto*|*downto*|*to*|*below*|*above*} *form*

▷ Specify *form* as the end value for stepping.

{*in*|*on*} *list*

▷ Bind *var* to successive elements/tails, respectively, of *list*.

**by** {*step*|*function* *#cdr*}

▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= *foo* [**then** *bar* *foo*]

▷ Bind *var* initially to *foo* and later to *bar*.

**across** *vector*

▷ Bind *var* to successive elements of *vector*.

**being** {*the*|*each*}

▷ Iterate over a hash table or a package.

{*hash-key*|*hash-keys*} {*of*|*in*} *hash-table* [**using** (*hash-value* *value*)]

▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

Figure 1: Loop Facility, Overview.

Figure 2: Precedence Order of System Classes (□), Classes (▢), Types (▣), and Condition Types (▤). Every type is also a supertype of NIL, the empty type.

**\*debugger-hook\***<sub>(NIL)</sub>

▷ Function of condition and function itself. Called before debugger.

## 12 Types and Classes

For any class, there is always a corresponding type of the same name.

(*f***typep** *foo* *type* [*environment*<sub>(NIL)</sub>]) ▷ T if *foo* is of *type*.

(*f***subtypep** *type-a* *type-b* [*environment*])  
▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(*s***the** *type* *form*) ▷ Declare values of form to be of *type*.

(*f***coerce** *object* *type*) ▷ Coerce *object* into *type*.

(*m***typecase** *foo* (*type* *a-form*<sup>P\*</sup>)<sup>\*</sup> [(*otherwise*<sub>T</sub>) *b-form*<sub>(NIL)</sub><sup>P\*</sup>])  
▷ Return values of the first a-form\* whose *type* is *foo* of. Return values of b-forms if no *type* matches.

(*m***etypecase**)  
(*m***ctypecase**) *foo* (*type* *form*<sup>P\*</sup>)<sup>\*</sup>  
▷ Return values of the first form\* whose *type* is *foo* of. Signal non-correctable/correctable **type-error** if no *type* matches.

(*f***type-of** *foo*) ▷ Type of foo.

(*m***check-type** *place* *type* [*string*<sub>{[a]an} type</sub>])  
▷ Signal correctable **type-error** if *place* is not of *type*. Return NIL.

(*f***stream-element-type** *stream*) ▷ Type of *stream* objects.

(*f***array-element-type** *array*) ▷ Element type *array* can hold.

(*f***upgraded-array-element-type** *type* [*environment*<sub>(NIL)</sub>])  
▷ Element type of most specialized array capable of holding elements of *type*.

(*m***deftype** *foo* (*macro-λ*<sup>\*</sup>)  $\left\{ \left( \frac{\text{declare } \widehat{decl}^*}{doc} \right)^* \right\}$  *form*<sup>P\*</sup>)  
▷ Define type *foo* which when referenced as (*foo* *arg*<sup>\*</sup>) (or as *foo* if *macro-λ* doesn't contain any required parameters) applies expanded *forms* to *args* returning the new type. For (*macro-λ*<sup>\*</sup>) see page 18 but with default value of **\*** instead of NIL. *forms* are enclosed in an implicit **block** named *foo*.

(*eql* *foo*)  
(*member* *foo*<sup>\*</sup>) ▷ Specifier for a type comprising *foo* or *foos*.

(*satisfies* *predicate*)  
▷ Type specifier for all objects satisfying *predicate*.

(*mod* *n*) ▷ Type specifier for all non-negative integers < *n*.

(*not* *type*) ▷ Complement of type.

(*and* *type*<sup>\*<sub>(T)</sub></sup>) ▷ Type specifier for intersection of *types*.

(*or* *type*<sup>\*<sub>(NIL)</sub></sup>) ▷ Type specifier for union of *types*.

(*values* *type*<sup>\*</sup> [*&optional* *type*<sup>\*</sup> [*&rest* *other-args*]])  
▷ Type specifier for multiple values.

**\*** ▷ As a type argument (cf. Figure 2): no restriction.

{*hash-value*|*hash-values*} {*of*|*in*} *hash-table* [*using* (*hash-key* *key*)]  
▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{*symbol*|*symbols*|*present-symbol*|*present-symbols*|*external-symbol*|*external-symbols*} [{*of*|*in*}] *package*<sub>{*package*<sup>\*</sup></sub>  
▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

{*do*|*doing*} *form*<sup>+</sup>  
▷ Evaluate *forms* in every iteration.

{*if*|*when*|*unless*} *test* *i-clause* {*and* *j-clause*}<sup>\*</sup> [*else* *k-clause* {*and* *l-clause*}<sup>\*</sup>] [*end*]  
▷ If *test* returns T, T, or NIL, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

*it* ▷ Inside *i-clause* or *k-clause*: value of test.

*return* {*form*|*it*}  
▷ Return immediately, skipping any **finally** parts, with values of *form* or *it*.

{*collect*|*collecting*} {*form*|*it*} [*into* *list*]  
▷ Collect values of *form* or *it* into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

{*append*|*appending*|*nconc*|*nconcing*} {*form*|*it*} [*into* *list*]  
▷ Concatenate values of *form* or *it*, which should be lists, into *list* by the means of *fappend* or *fncnc*, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

{*count*|*counting*} {*form*|*it*} [*into* *n*] [*type*]  
▷ Count the number of times the value of *form* or of *it* is T. If no *n* is given, count into an anonymous variable which is returned after termination.

{*sum*|*summing*} {*form*|*it*} [*into* *sum*] [*type*]  
▷ Calculate the sum of the primary values of *form* or of *it*. If no *sum* is given, sum into an anonymous variable which is returned after termination.

{*maximize*|*maximizing*|*minimize*|*minimizing*} {*form*|*it*} [*into* *max-min*] [*type*]  
▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of *it*. If no *max-min* is given, use an anonymous variable which is returned after termination.

{*initially*|*finally*} *form*<sup>+</sup>  
▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

*repeat* *num*  
▷ Terminate *mloop* after *num* iterations; *num* is evaluated once.

{*while*|*until*} *test*  
▷ Continue iteration until *test* returns NIL or T, respectively.

{*always*|*never*} *test*  
▷ Terminate *mloop* returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue *mloop* with its default return value set to T.

*thereis* *test*  
▷ Terminate *mloop* when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue *mloop* with its default return value set to NIL.

(*mloop-finish*)  
▷ Terminate *mloop* immediately executing any **finally** clauses and returning any accumulated results.

## 10 CLOS

### 10.1 Classes

(*f***slot-exists-p** *foo* *bar*) ▷ T if *foo* has a slot *bar*.

(*f*slot-boundp *instance slot*)    ▷ T if *slot* in *instance* is bound.

(*m*defclass *foo* (*superclass* <sup>\*</sup>standard-object)

$$\left. \left( \left( \text{slot} \left( \left( \begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ \text{(setf writer)} \end{array} \right\}^* \\ \text{:accessor } \text{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \text{ instance} \end{array} \right\} \\ \text{:initarg } [:\text{initarg-name}]^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right) \right) \right) \right) \right)$$

(*default-initargs* {*name value*}<sup>\*</sup>)  
(*documentation* *class-doc*)  
(*metaclass* *name* standard-class)

▷ Define or modify class *foo* as a subclass of *superclasses*. Transform existing instances, if any, by *g*make-instances-obsolete. In a new instance *i* of *foo*, a *slot*'s value defaults to *form* unless set via *[:initarg-name]*; it is readable via (*reader i*) or (*accessor i*), and writable via (*writer value i*) or (**setf** (*accessor i*) *value*). *slots* with **allocation** **class** are shared by all instances of class *foo*.

(*f*find-class *symbol* [*errorp* environment])  
▷ Return class named *symbol*. **setfable**.

(*g*make-instance *class* {*[:initarg value]*<sup>\*</sup> *other-keyarg*<sup>\*</sup>)  
▷ Make new instance of *class*.

(*g*reinitialize-instance *instance* {*[:initarg value]*<sup>\*</sup> *other-keyarg*<sup>\*</sup>)  
▷ Change local slots of *instance* according to *initargs* by means of *g*shared-initialize.

(*f*slot-value *foo slot*)    ▷ Return value of *slot* in *foo*. **setfable**.

(*f*slot-makunbound *instance slot*)  
▷ Make *slot* in *instance* unbound.

(*m*with-slots ((*slot* (*var slot*)<sup>\*</sup>)  
*m*with-accessors ((*var accessor*)<sup>\*</sup>)) *instance* (**declare** *decl*)<sup>\*</sup>  
*form*<sup>P</sup>)  
▷ Return values of *forms* after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or *vars*/with *accessors* of *instance* visible as **setfable vars**.

(*g*class-name *class*)  
(**setf** *g*class-name *new-name class*)    ▷ Get/set name of *class*.

(*f*class-of *foo*)    ▷ Class *foo* is a direct instance of.

(*g*change-class *instance new-class* {*[:initarg value]*<sup>\*</sup> *other-keyarg*<sup>\*</sup>)  
▷ Change class of *instance* to *new-class*. Retain the status of any slots that are common between *instance*'s original class and *new-class*. Initialize any newly added slots with the values of the corresponding *initargs* if any, or with the values of their **initform** forms if not.

(*g*make-instances-obsolete *class*)  
▷ Update all existing instances of *class* using *g*update-instance-for-redefined-class.

(*g*initialize-instance *instance*  
*g*update-instance-for-different-class *previous current*)  
{*[:initarg value]*<sup>\*</sup> *other-keyarg*<sup>\*</sup>)  
▷ Set slots on behalf of *g*make-instance/of *g*change-class by means of *g*shared-initialize.

(*g*update-instance-for-redefined-class *new-instance added-slots*  
*discarded-slots discarded-slots-property-list*  
{*[:initarg value]*<sup>\*</sup> *other-keyarg*<sup>\*</sup>)  
▷ On behalf of *g*make-instances-obsolete and by means of *g*shared-initialize, set any *initarg* slots to their corresponding values; set any remaining *added-slots* to the values of their **initform** forms. Not to be called by user.

(*m*restart-bind ((<sup>*restart*</sup>  
NIL) *restart-function*  
{**interactive-function** *arg-function*  
**report-function** *report-function*  
**test-function** *test-function*})<sup>\*</sup>) *form*<sup>P</sup>)

▷ Return values of *forms* evaluated with dynamically established *restarts* whose *restart-functions* should perform a non-local transfer of control. A restart is visible under *condition* if (*test-function condition*) returns T. If presented in the debugger, *restarts* are described by *restart-function* (of a stream). A *restart* can be called by (**invoke-restart** *restart arg*<sup>\*</sup>), where *args* must be suitable for the corresponding *restart-function*, or by (**invoke-restart-interactively** *restart*) where a list of the respective *args* is supplied by *arg-function*.

(*f*invoke-restart *restart arg*<sup>\*</sup>)

(*f*invoke-restart-interactively *restart*)

▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

{*f*find-restart  
*f*compute-restarts *name*} [*condition*]

▷ Return innermost restart name, or a list of all restarts, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return NIL if search is unsuccessful.

(*f*restart-name *restart*)    ▷ Name of *restart*.

{*f*abort  
*f*muffle-warning  
*f*continue  
*f*store-value *value*  
*f*use-value *value*} [*condition* nil]

▷ Transfer control to innermost applicable restart with same name (i.e. **abort**, ..., **continue** ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for *f*abort and *f*muffle-warning, or return NIL for the rest.

(*m*with-condition-restarts *condition restarts form*<sup>P</sup>)

▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of forms.

(*f*arithmetic-error-operation *condition*)

(*f*arithmetic-error-operands *condition*)

▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(*f*cell-error-name *condition*)

▷ Name of cell which caused *condition*.

(*f*unbound-slot-instance *condition*)

▷ Instance with unbound slot which caused *condition*.

(*f*print-not-readable-object *condition*)

▷ The object not readably printable under *condition*.

(*f*package-error-package *condition*)

(*f*file-error-pathname *condition*)

(*f*stream-error-stream *condition*)

▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.

(*f*type-error-datum *condition*)

(*f*type-error-expected-type *condition*)

▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(*f*simple-condition-format-control *condition*)

(*f*simple-condition-format-arguments *condition*)

▷ Return fformat control or list of fformat arguments, respectively, of *condition*.

<sup>\*</sup>break-on-signals\*nil

▷ Condition type debugger is to be invoked on.

(*f*make-condition *condition-type* {[[:initarg-name value]\*]})

▷ Return new instance of *condition-type*.

$\left\{ \begin{array}{l} \text{fsignal} \\ \text{fwarn} \\ \text{ferror} \end{array} \right\} \left\{ \begin{array}{l} \text{condition} \\ \text{condition-type } \{[:initarg-name value]^*\} \\ \text{control arg}^* \end{array} \right\}$

▷ Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new instance of *condition-type* or, with *f*format *control* and *args* (see page 36), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From *f*signal and *f*warn, return NIL.

(*f*cerror *continue-control*

$\left\{ \begin{array}{l} \text{condition } \text{continue-arg}^* \\ \text{condition-type } \{[:initarg-name value]^*\} \\ \text{control arg}^* \end{array} \right\}$

▷ Unless handled, signal as correctable **error** *condition* or a new instance of *condition-type* or, with *f*format *control* and *args* (see page 36), **simple-error**. In the debugger, use *f*format arguments *continue-control* and *continue-args* to tag the continue option. Return NIL.

(*m*ignore-errors *form*<sup>P</sup>)

▷ Return values of forms or, in case of **errors**, NIL and the condition.

(*f*invoke-debugger *condition*)

▷ Invoke debugger with *condition*.

(*m*assert *test* [(*place*\*)

$\left\{ \begin{array}{l} \text{condition } \text{continue-arg}^* \\ \text{condition-type } \{[:initarg-name value]^*\} \\ \text{control arg}^* \end{array} \right\}$ )]

▷ If *test*, which may depend on *places*, returns NIL, signal as correctable **error** *condition* or a new instance of *condition-type* or, with *f*format *control* and *args* (see page 36), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return NIL.

(*m*handler-case *foo* (*type* ([*var*]) (declare  $\widehat{\text{decl}}^*$ )<sup>P</sup> *condition-form*<sup>P</sup>)\*

[(*no-error* (*ord-λ*\*) (declare  $\widehat{\text{decl}}^*$ )<sup>P</sup> *form*<sup>P</sup>)]

▷ If, on evaluation of *foo*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition, and return their values. Without a condition, bind *ord-λs* to values of *foo* and return values of *forms* or, without a **no-error** clause, return values of *foo*. See page 17 for (*ord-λ*\*)<sup>P</sup>.

(*m*handler-bind ((*condition-type* *handler-function*)<sup>\*</sup>) *form*<sup>P</sup>)

▷ Return values of forms after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

(*m*with-simple-restart ( $\left\{ \begin{array}{l} \text{restart} \\ \text{NIL} \end{array} \right\}$  *control arg*\*) *form*<sup>P</sup>)

▷ Return values of forms unless *restart* is called during their evaluation. In this case, describe *restart* using *f*format *control* and *args* (see page 36) and return NIL and T.

(*m*restart-case *form* (*restart* (*ord-λ*\*)  $\left\{ \begin{array}{l} \text{:interactive } \text{arg-function} \\ \text{:report } \left\{ \begin{array}{l} \text{report-function} \\ \text{string } \underline{\text{restart}} \end{array} \right\} \\ \text{:test } \text{test-function} \end{array} \right\}$ )

(declare  $\widehat{\text{decl}}^*$ )<sup>P</sup> *restart-form*<sup>P</sup>)\*

▷ Return values of form or, if during evaluation of *form* one of the dynamically established *restarts* is called, the values of its restart-forms. A *restart* is visible under *condition* if (*funcall* #'*test-function* *condition*) returns T. If presented in the debugger, *restarts* are described by *string* or by #'*report-function* (of a stream). A *restart* can be called by (*invoke-restart* *restart* *arg*\*)<sup>P</sup>, where *args* match *ord-λ*\*, or by (*invoke-restart-interactively* *restart*) where a list of the respective *args* is supplied by #'*arg-function*. See page 17 for *ord-λ*.\*

(*g*allocate-instance *class* {[[:initarg value]\* other-keyarg\*]})

▷ Return uninitialized instance of *class*. Called by *g*make-instance.

(*g*shared-initialize *instance*  $\left\{ \begin{array}{l} \text{initform-slots} \\ \text{T} \end{array} \right\}$  {[[:initarg-slot value]\*

*other-keyarg*\*)

▷ Fill the *initarg-slots* of *instance* with the corresponding *values*, and fill those *initform-slots* that are not *initarg-slots* with the values of their *initform* forms.

(*g*slot-missing *class* *instance* *slot*  $\left\{ \begin{array}{l} \text{setf} \\ \text{slot-boundp} \\ \text{slot-makunbound} \\ \text{slot-value} \end{array} \right\}$  [*value*])

(*g*slot-unbound *class* *instance* *slot*)

▷ Called on attempted access to non-existing or unbound *slot*. Default methods signal **error/unbound-slot**, respectively. Not to be called by user.

## 10.2 Generic Functions

(*f*next-method-p) ▷ T if enclosing method has a next method.

(*m*defgeneric  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$  (*required-var*\* [**&optional**  $\left\{ \begin{array}{l} \text{var} \\ \text{(var)} \end{array} \right\}^*$ ] [**&rest** *var*] [**&key**  $\left\{ \begin{array}{l} \text{var} \\ \text{(var) (:key var)} \end{array} \right\}^*$ ] [**&allow-other-keys**])

$\left\{ \begin{array}{l} \text{:argument-precedence-order } \text{required-var}^+ \\ \text{(declare (optimize method-selection-optimization})^+)} \\ \text{:documentation } \text{string} \\ \text{:generic-function-class } \text{gf-class} \underline{\text{standard-generic-function}} \\ \text{:method-class } \text{method-class} \underline{\text{standard-method}} \\ \text{:method-combination } \text{c-type} \underline{\text{standard}} \text{ c-arg}^* \\ \text{(method } \text{defmethod-args})^* \end{array} \right\}$

▷ Define or modify generic function *foo*. Remove any methods previously defined by *defgeneric*. *gf-class* and the lambda parameters *required-var*\* and *var*\* must be compatible with existing methods. *defmethod-args* resemble those of *m*defmethod. For *c-type* see section 10.3.

(*f*ensure-generic-function  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$

$\left\{ \begin{array}{l} \text{:argument-precedence-order } \text{required-var}^+ \\ \text{:declare (optimize method-selection-optimization)} \\ \text{:documentation } \text{string} \\ \text{:generic-function-class } \text{gf-class} \\ \text{:method-class } \text{method-class} \\ \text{:method-combination } \text{c-type } \text{c-arg}^* \\ \text{:lambda-list } \text{lambda-list} \\ \text{:environment } \text{environment} \end{array} \right\}$

▷ Define or modify generic function *foo*. *gf-class* and *lambda-list* must be compatible with a pre-existing generic function or with existing methods, respectively. Changes to *method-class* do not propagate to existing methods. For *c-type* see section 10.3.

(*m*defmethod  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$   $\left\{ \begin{array}{l} \text{:before} \\ \text{:after} \\ \text{:around} \end{array} \right\}$  [primary method] [*qualifier*]\*

$\left\{ \begin{array}{l} \text{var} \\ \text{(spec-var } \left\{ \begin{array}{l} \text{class} \\ \text{(eql bar)} \end{array} \right\})^* \end{array} \right\}$  [**&optional**  $\left\{ \begin{array}{l} \text{var} \\ \text{(var [init [supplied-p]])} \end{array} \right\}^*$ ] [**&rest** *var*] [**&key**  $\left\{ \begin{array}{l} \text{var} \\ \text{(var } \left\{ \begin{array}{l} \text{var} \\ \text{(key var)} \end{array} \right\}) \text{ [init [supplied-p]]} \end{array} \right\}^*$ ] [**&allow-other-keys**] [**&aux**  $\left\{ \begin{array}{l} \text{var} \\ \text{(var [init])} \end{array} \right\}^*$ ]  $\left\{ \begin{array}{l} \text{(declare } \widehat{\text{decl}}^* \text{)}^* \\ \widehat{\text{doc}} \end{array} \right\}$  *form*<sup>P</sup>)

▷ Define **new method** for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eq** *bar*, respectively. On invocation, *vars* and *spec-vars* of the **new method** act like parameters of a function with body *form\**. *forms* are enclosed in an implicit **block** *foo*. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

$\left\{ \begin{array}{l} \text{gadd-method} \\ \text{gremove-method} \end{array} \right\} \text{generic-function method}$

▷ Add (if necessary) or remove (if any) *method* to/from *generic-function*.

$\text{gfind-method } \text{generic-function qualifiers specializers } [\text{error}\underline{\text{T}}]$

▷ Return suitable *method*, or signal **error**.

$\text{gcompute-applicable-methods } \text{generic-function args}$

▷ List of methods suitable for *args*, most specific first.

$\text{fcall-next-method } \text{arg}^* \underline{\text{current args}}$

▷ From within a method, call next method with *args*; return its values.

$\text{gno-applicable-method } \text{generic-function arg}^*$

▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**. Not to be called by user.

$\left\{ \begin{array}{l} \text{finvalid-method-error } \text{method} \\ \text{fmethod-combination-error} \end{array} \right\} \text{control arg}^*$

▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, page 36.

$\text{gno-next-method } \text{generic-function method arg}^*$

▷ Called on invocation of **call-next-method** when there is no next method. Default method signals **error**. Not to be called by user.

$\text{gfunction-keywords } \text{method}$

▷ Return list of keyword parameters of *method* and **T** if other keys are allowed.

$\text{gmethod-qualifiers } \text{method}$  ▷ List of qualifiers of *method*.

## 10.3 Method Combination Types

### standard

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, **fcall-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling **fcall-next-method** if any, or of the generic function; and which can call less specific primary methods via **fcall-next-method**. After its return, call all **:after** methods, least specific first.

**and|or|append|list|nconc|progn|max|min|+**

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of **mdefine-method-combination**.

$\text{(mdefine-method-combination } \text{c-type}$

$\left\{ \begin{array}{l} \text{:documentation } \text{string} \\ \text{:identity-with-one-argument } \text{bool}\underline{\text{T}} \\ \text{:operator } \text{operator}\underline{\text{c-type}} \end{array} \right\}$

▷ **Short Form**. Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **fcall-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, return from the calling **call-next-method** or from the generic function, respectively, the values of (*operator* (*primary-method* *gen-arg\**)\*), *gen-arg\** being the arguments of the generic function. The *primary-methods* are ordered  $\left[ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right] \underline{\text{[most-specific-first]}}$  (specified as *c-arg* in **mdefgeneric**). Using *c-type* as the *qualifier* in **mdefmethod** makes the method primary.

$\text{(mdefine-method-combination } \text{c-type } (\text{ord-}\lambda^*) ((\text{group}$

$\left. \begin{array}{l} * \\ (\text{qualifier}^* \text{ [ * ]}) \\ \text{predicate} \end{array} \right\}$   
 $\left. \begin{array}{l} \text{:description } \text{control} \\ \text{:order } \left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} \underline{\text{[most-specific-first]}} \\ \text{:required } \text{bool} \end{array} \right\}^*$   
 $\left. \begin{array}{l} (\text{:arguments } \text{method-combination-}\lambda^*) \\ (\text{:generic-function } \text{symbol}) \\ \left\{ \begin{array}{l} (\text{declare } \underline{\text{decl}}^*) \\ \underline{\text{doc}} \end{array} \right\} \end{array} \right\} \text{body}^*$

▷ **Long Form**. Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body\** with *ord-λ\** bound to *c-arg\** (cf. **mdefgeneric**), with *symbol* bound to the generic function, with *method-combination-λ\** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the left-most *group* whose *predicate* or *qualifiers* match. Methods can be called via **mcall-method**. Lambda lists (*ord-λ\**) and (*method-combination-λ\**) according to *ord-λ* on page 17, the latter enhanced by an optional **&whole** argument.

$\text{(mcall-method}$

$\left\{ \begin{array}{l} \text{method} \\ (\text{mmake-method } \underline{\text{form}}) \end{array} \right\} \left[ \left( \left\{ \begin{array}{l} \text{next-method} \\ (\text{mmake-method } \underline{\text{form}}) \end{array} \right\}^* \right) \right]$

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

## 11 Conditions and Errors

For standardized condition types cf. Figure 2 on page 31.

$\text{(mdefine-condition } \text{foo } (\text{parent-type}^* \underline{\text{condition}})$

$\left. \begin{array}{l} \text{slot} \\ \left\{ \begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ (\text{setf } \text{writer}) \end{array} \right\}^* \\ \text{:accessor } \text{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} \underline{\text{[instance]}} \\ \text{:initarg } \left[ \text{:initarg-name} \right]^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right\} \\ \left\{ \begin{array}{l} \text{:default-initargs } \{ \text{name value} \}^* \\ \text{:documentation } \text{condition-doc} \end{array} \right\} \\ \left\{ \begin{array}{l} \text{:report } \left\{ \begin{array}{l} \text{string} \\ \text{report-function} \end{array} \right\} \end{array} \right\} \end{array} \right\}^*$

▷ Define, as a subtype of *parent-types*, condition type *foo*. In a new condition, a *slot*'s value defaults to *form* unless set via  $\text{[:initarg name]}$ ; it is readable via (*reader* *i*) or (*accessor* *i*), and writable via (*writer* *value* *i*) or (**setf** (*accessor* *i*) *value*). With **:allocation** **:class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or by *report-function* of arguments condition and stream.
